# Operating Instructions

Impact Dot Matrix Printer

## KX-P3124

*Quiet*

*Printing*

Before operating this unit, please read these instructions completely.

## **FOR USERS IN UNITED STATES ONLY**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The user may find the booklet "Something About Interference" available from FCC local regional offices helpful.

**FCC Warning:** To assure continued FCC emission limit compliance, the user must use only the recommended shield interfacing cable when connecting to a host computer. Also, any unauthorized changes or modifications to this equipment would void the users authority to operate this device.

## WARNING

- The power source voltage of this unit is listed on the nameplate. Plug the printer only into an outlet with the proper voltage.
- To prevent fire or shock hazard, do not expose this product to rain or any type of moisture.
- When you operate this equipment, the outlet should be near the equipment and should be easily accessible.

The serial number of the unit may be found on the label on the rear of the unit. For your convenience, note this number below, and retain this book, along with your proof of purchase, to serve as a permanent record of your purchase in the event of a theft, or for future reference.

# Introduction

Congratulations on purchasing a Panasonic printer.

This printer is a versatile, high quality 24-pin dot matrix printer which is designed to meet the needs of your office.

Your printer contains an EZ Set Operator Panel featuring a 16-character Liquid Crystal Display (LCD) that lets you control a wide variety of printing conditions quickly and conveniently.

This printer has been factory set to operate with most of the popular software packages. Your application software should control the printer functions. In most cases, there will be need to change the initial printer settings.

## Features

<b>Printer Emulation:</b>	Epson LQ-570 and IBM Proprinter X24E
<b>Setup Disk:</b>	A Printer-Driver for Windows Ver. 3.1, Function mode program and Command Reference program
<b>ATM Disk:</b>	Adobe Type Manager with 13 scalable Adobe fonts for Windows 3.0 or higher
<b>Super Quiet Mode:</b>	Reduces printing noise
<b>Color Printing:</b>	7 colors with the optional color kit (KX-PCK11)
<b>Fonts:</b>	3 Draft ( Pica , Elite , Micron ) 8 Letter Quality ( Roman , Sans Serif , Courier , Prestige , Script , OCR-B , Bold PS , ORATOR ) 1 Super Letter Quality ( Roman ) 6 Scalable Fonts ( Roman , Sans Serif , Courier , Prestige , Script , Bold PS )
<b>Printing Speed:</b>	Draft—256 characters per second (12 cpi) LQ—85 characters per second (12 cpi) SLQ—42 characters per second (12 cpi)
<b>Paper Handling:</b>	Friction and Tractor (Pull/Push built-in)
<b>Paper Paths:</b>	Rear, Bottom, Front, Top
<b>Tear Off:</b>	Advances fanfold paper's perforation to tear position
<b>Paper Parking:</b>	Allows single sheets/envelopes to be used without removing/wasting fanfold paper
<b>Cut Sheet Feeder Option (KX-PT11):</b>	Provides fast and automatic feeding of single sheets
<b>Serial Interface Option (KX-PS13 and KX-PS14):</b>	You may select parallel or serial when either serial interface board is installed.

# Cautions

## Operating Environment

- Do not use the printer under the following conditions.

Extremely high or low temperature  
[temperature range: 10° to 35°C (50° to 95°F)]

Extremely high or low humidity  
(humidity range: 30% to 80% RH)

Areas of poor ventilation  
[a minimum of 4" (10 cm) clearance on all sides is necessary to insure proper ventilation]

Areas of high dust concentration

Areas with extreme vibration

Areas on an unstable or unlevel surface

- Power consumption:  
(MAX—250 W, Stand by—12 W, Self Test—50 W)

## Precautions

The following precautions are recommended to extend the life of the printer.

### Keep all liquids away from the printer.

—Accidental spillage of a liquid into the printer can cause severe damage.

### Do not place books, paper, or other items on top of the printer.

### Do not operate the printer without paper and a ribbon cassette installed.

### Avoid prolonged use without allowing the printhead time to cool.

### Do not obstruct the movement of the printhead while in operation.

### If the printer is not going to be used for an extended period, unplug the power cord.

# Unpacking

Having unpacked the printer, make sure none of the contents shown below are missing or damaged. Report damage or shortages to the store from which the unit was purchased.

**Printer (KX-P3124)**

**Ribbon cassette (KX-P150)**

**Platen knob**

**Operating manual**

**Setup Disk**

**ATM Disk**

- The Setup Disk contains a Printer-Driver for Windows Ver. 3.1 (P. 39), a Function Mode program (P. 70) and a Command Reference program (P. 90).
- To use the Setup Disk you need to have an IBM-PC or a Compatible computer with a 3.5" floppy disk drive.
- For detailed information on ATM Disk, refer to ATM Disk manual.

**Note:**

- It is recommended that you save the original carton and packing materials for proper shipping and transporting of the printer.

## Assembling the parts

- 1 Insert the platen knob into the hole on the right side of the printer and rotate it slowly until it slips onto the shaft. Push the platen knob onto the platen shaft to secure.

- 2 Fold the smoked plastic cover, and remove the protective paper.

## 3 Open the smoked plastic cover.

## 4 Remove the top cover pad.

# Parts of the Printer

EZ set operator panel

## ① 16-Character Liquid Crystal Display (LCD)

A 16-character LCD prompts the user with messages and step-by-step instructions. In case of incorrect operations, the display will immediately indicate the appropriate error messages so you may take corrective action. (P. 96)

## ② SUPER QUIET (←) Switch

Pressing this switch reduces print noise, however it also reduces the printing speed. When it is active, the SUPER QUIET indicator is lit and the display briefly shows QUIET MODE=ON.

**In the Function mode**, this switch scrolls back through the Main menu, the Sub-menu and the selections or conditions of the item.

## ③ TEAR OFF (↑) Switch

Pressing this switch advances or reverses the paper for tear off in the OFF LINE mode or when not printing in the ON LINE mode. (P. 44)

**In the Function mode**, this switch returns you to the previous menu level such as "Selection → Sub-menu → Main menu".

## ④ LOAD/PARK (↓) Switch

This switch loads/parks the paper in the OFF LINE mode or when not printing in the ON LINE mode.

**In the Function mode**, this switch lets you scroll down to the next menu level such as "Main menu → Sub-menu → Selection".

## ⑤ TOF SET (→) Switch

This switch allows you to set the Top of Form in the OFF LINE mode or when not printing in the ON LINE mode. (P. 50)

**In the Function mode**, this switch scrolls through the Main menu, the Sub-menu and the selections or conditions of the item.

## ⑥ ON LINE/FUNCTION Indicator

This indicator is lit when the printer is in the ON LINE mode, and the indicator is not lit in the OFF LINE mode.

**In the Function mode**, the indicator blinks.

## ⑦ SUPER QUIET Indicator (②)

## ⑧ POWER/PAPER OUT Indicator

This indicator is lit when the power switch is turned on and paper is installed. When an out of paper condition occurs, the POWER/PAPER OUT indicator blinks.

## ⑨ ON LINE (FONT) Switch

This switch opens and closes the communication line with the computer. When the power switch is turned on and paper is installed, the ON LINE indicator is lit, the display shows "ON LINE", and the printer is ready to receive data from the computer. In the OFF LINE mode, the indicator is out, the display shows "OFF LINE" and the printer can no longer receive data.

**In the Function mode**, this switch lets you directly access the FONT selection with one step. (P. 55)

## ⑩ FF (PITCH) Switch

This switch moves the carriage to the center and advances the paper to the top of the next page (depending on your TOF setting) in the OFF LINE mode or when the printer is not printing in the ON LINE mode.

**In the Function mode**, this switch lets you directly access the PITCH Selection with one step. (P. 55)

## ⑪ LF (SET) Switch

This switch advances the paper one line. Holding the switch down performs multiple line feeds. These functions are active in the OFF LINE mode or when the printer is not printing in the ON LINE mode.

**In the Function mode**, this switch sets selections or conditions of the item shown on the display and returns you to the Sub-menu.

## ⑫ FUNCTION Switch

This switch allows you to enter and exit the Function mode.

**In the Function mode**, the ON LINE/FUNCTION indicator blinks and the EZ Set Operator Panel switches have secondary capabilities, for easily setting your desired print conditions. (P. 52)

## Printhead gap lever

Adjusts the gap between the platen and the printhead. The lever moves in increments of 0.0028 inch (0.07 mm).

Position	Used for
1 or 2	Thinner sheets
3, 4, 5 and 6	Thick or multiple sheets Envelopes

## Paper feed selector (P. 23)

Position	Used for
<input type="checkbox"/> (Friction)	Single sheets and Envelopes
<input checked="" type="checkbox"/> (Tractor) PULL	Fanfold paper with PULL tractor mode
<input type="checkbox"/> (Tractor) PUSH	Fanfold paper with PUSH tractor mode

# Connecting to a Computer

1

**Attach one end of the parallel interface cable to your printer as shown, and the other end to your computer.**

Be sure to secure the printer clips.

**Note:**

- If you do not have a parallel interface cable, you will need to purchase one from your local computer store or dealer.

**If the cable has a frame ground wire, connect it to the frame ground terminal.**

2

**Plug printer into a grounded 3 prong AC socket.**

When power is supplied to the printer, the power indicator on the EZ Set Operator Panel will light.

# Ribbon Cassette

## Installing the Ribbon Cassette

Chap. 2

Setup

1

Turn the power switch off for safety.

2

Fold the smoked plastic cover forward by lifting the tab on right side.

3

① Raise the smoked plastic cover.

② Remove the smoked plastic cover.

**Caution:**

- The printhead may be hot, use caution when cover is open.

Slide the carriage gently toward the center of the unit.

Move the printhead gap lever to the (+) position.

Rotate the knob on the ribbon cassette to remove any slack.

7

- ❶ Slip the ribbon between the ribbon mask and the printhead nose.

- ❷ Press down on rear of the cassette until the blue wing tab snaps into place.

8

Replace the smoked plastic cover.

9

Adjust the printhead gap lever for the thickness of paper you are using.

Position	Used for
1 or 2	Thinner sheets
3, 4, 5 and 6	Thick or multiple sheets or envelopes

## Removing the Ribbon Cassette

1

Turn the power switch off for safety.

2

Fold the smoked plastic cover forward by lifting the tab on right side.

## Ribbon Cassette

3

- ① Raise the smoked plastic cover.
- ② Remove the smoked plastic cover.

**Caution:**

- The printhead may be hot, use caution when cover is open.

4

Move the printhead gap lever to the (+) position.

5

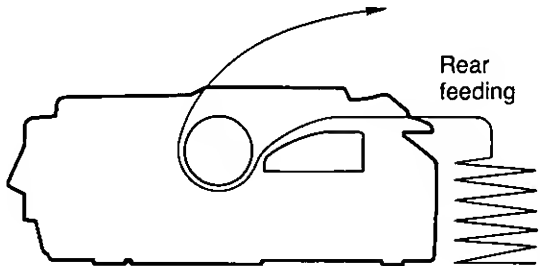

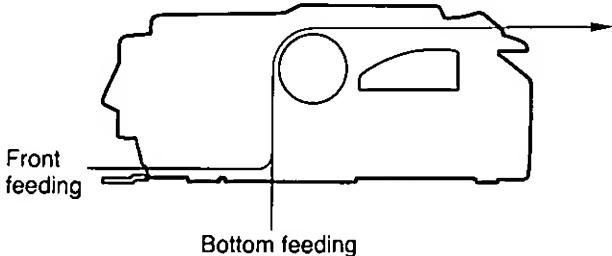

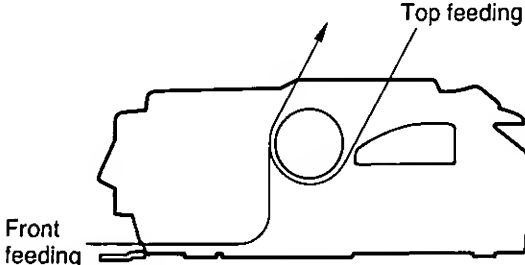

Spread the blue wing tab and lift up the cassette.

# Paper Feed Selection

This printer has two paper feed mechanisms to support 4 paper paths. One mechanism is TRACTOR mode for continuously fed paper. In the tractor mode you can choose between PUSH or PULL.

The other paper feed mechanism is FRICTION mode. In the friction mode you can feed single sheets or envelopes through the front or top. The optional KX-PT11 Cut Sheet Feeder will accommodate automatic feeding of single sheets, from the top paper path.

<p>Push Tractor mode (<input checked="" type="checkbox"/> PUSH)</p> <ul style="list-style-type: none"> <li>— fanfold paper (1 part)</li> <li>— multipart forms consisting of 2 parts</li> </ul>	 <p>Rear feeding</p>
<p>Pull Tractor mode (<input checked="" type="checkbox"/> PULL)</p> <ul style="list-style-type: none"> <li>— multipart forms consisting of 3 or 4 parts</li> <li>— labels</li> <li>— fanfold paper (1 part)</li> </ul>	 <p>Front feeding</p> <p>Bottom feeding</p>
<p>Friction mode (<input type="checkbox"/>)</p> <ul style="list-style-type: none"> <li>— single sheets (The KX-PT11 Cut Sheet Feeder allows you to automatically feed up to 80 sheets of 20 lb paper.)</li> <li>— envelopes</li> </ul>	 <p>Top feeding</p> <p>Front feeding</p>

## Note:

- For optimum print quality, do not use reverse line feeding in pull mode. If reverse feeding is necessary in pull mode, set **REV LF/PULL** in the **INSTALL** menu to **ON** through the Function mode.
- Paper Parking is not available in pull mode.
- Multipart forms consisting of 2 parts may be used for rear feeding (PUSH mode). For 3 or 4 part forms, we recommend bottom feeding (PULL mode) for optimum print quality.
- When printing on envelopes or thick sheets, front feeding is recommended.

# Installing Paper

## Fanfold Paper: Push Tractor Mode—Rear Feed

1

1 Turn the power on.

A beep will sound once and the PAPER OUT indicator will flash. This indicates that there is no paper installed in the printer.

2 Adjust the printhead gap lever for the thickness of paper you are using.

Position	Used for
1 or 2	Thinner sheets
3, 4, 5 and 6	Thick or multiple sheets

2

Set the paper feed selector to the "PUSH" position.

The display briefly shows "TRACTOR/PUSH".

3

1 Fold the smoked plastic cover forward by lifting tab on right side.

2 Remove the top cover.

4

① Unlock the tractors by pulling the tractor clamping levers forward.

② Slide the tractors to accommodate the approximate width of the paper being used.

In most applications, you will find that the 0 indicator on the tear bar is a useful tool for predetermining your left most print position.

5

① Raise the upper tractor covers (A).

② Raise the lower tractor covers (B).

6

Place paper holes onto tractor pins and align top edge of paper with PUSH lines on tractors.

## Installing Paper

7

❶ Close the lower tractor covers (B).

❷ Close the upper tractor covers (A).

8

❶ Adjust the tractors to remove any slack in the paper.

❷ Lock the tractor clamping levers.

9

Press  (LOAD/PARK).

This will load the paper to the first print line. The display shows "PAPER LOAD" and the PAPER OUT indicator will stop blinking.

10

- ❶ Replace the top cover.
- ❷ Close the smoked plastic cover.

11

If **ON LINE** indicator is not lit, press **ON LINE** to get ready to print.

**Note:**

- To avoid paper curl in PUSH mode, park the paper after use.

# Installing Paper

## Fanfold Paper: Pull Tractor Mode—Bottom/Front Feed

### 1 Turn the power on.

A beep will sound once and the PAPER OUT indicator will flash. This indicates that there is no paper installed in the printer.

### 2 Adjust the printhead gap lever for the thickness of paper you are using.

Position	Used for
1 or 2	Thinner sheets
3, 4, 5 and 6	Thick or multiple sheets

### Set the paper feed selector to the "PULL" position.

The display briefly shows "TRACTOR/PULL".

### 1 Fold the smoked plastic cover forward by lifting tab on right side.

### 2 Remove the top cover.

- ① Unlock the tractors by pulling the tractor clamping levers forward.
- ② Slide the tractors to accommodate the approximate width of the paper being used.

In most applications, you will find that the 0 indicator on the tear bar is a useful tool for predetermining your left most print position.

Raise the upper tractor covers (A) only.

Remove the pull up roller unit as shown.

**Note:**

- Do not forget to remove the pull up roller unit before using PULL mode.

## 7 When Bottom Feeding:

Push the paper up through the bottom opening until it appears in front of the platen.

## When Front Feeding:

Open the paper door and insert the paper along the paper guides until it appears in front of the platen.

### Note:

- When feeding fanfold paper through the front paper door, paper types and condition, as well as temperature and humidity conditions may effect accurate line feeding and print quality may not be optimum. For optimum output bottom feed is recommended.

## 8

Adjust the paper position by pulling it up as shown.

9

❶ Align the paper sprocket holes with the tractor pins making sure the paper is straight.

❷ Close the tractor covers.

10

❶ Adjust the tractors to remove any slack in the paper.

❷ Lock the tractor clamping levers.

11

Replace the pull up roller unit.

**Note:**

- Be sure to press down the pull up roller unit until it snaps into place.

## Installing Paper

12

① Replace the top cover to its original position.

② Close the smoked plastic cover.

13

If ON LINE indicator is not lit, press **ON LINE** to get ready to print.

**Note:**

- In the pull tractor mode, reverse feed functions will not feed paper correctly and the resulting printout may not be correct. If reverse feeding is necessary in pull mode, set **REV LF/PULL** in the **INSTALL** menu to **ON** through the Function mode.

## Single Sheets and Envelopes: Friction Mode—Top Feed

- 1** Turn the power switch on.

A beep will sound and the PAPER OUT indicator will flash. This indicates that there is no paper installed in the printer.

- 2** Adjust the printhead gap lever for the thickness of paper you are using.

Position	Used for
1 or 2	Thinner sheets
3, 4, 5 and 6	Thick sheets or Envelopes

- Set the paper feed selector to the "FRIC" position.**

The display briefly shows "FRICTION".

- 1** Fold the smoked plastic cover by lifting tab on right side.

- 2** Reposition the top cover into the single sheet position by inserting the top cover pins into the slots in the printer.

## Installing Paper

4

Separate the paper guides to the approximate width of your paper.

**Note:**

- To predetermine your left most print position, move the left paper guide until it clicks into place.

5

Insert one sheet of paper into the paper guide slots.

The paper will automatically load to the first print line.

6

Fold the smoked plastic cover until it rests against top cover.

If ON LINE indicator is not lit, press **ON LINE** to get ready to print.

**Note:**

- If the paper does not automatically load, press  (LOAD/PARK).
- When the paper feed selector is in the "PULL" position, the buzzer will sound to inform you that the selector is in the wrong position.
- When loading an envelope, if the envelope will not load smoothly, move the paper feed selector to the "PULL" position and insert the envelope manually, then move the selector back to the "PULL" position.
- When printing on envelopes or thick sheets, front feeding is recommended.

## Single Sheets and Envelopes: Friction Mode—Front Feed

**1 Turn the power switch on.**

A beep will sound and the PAPER OUT indicator will flash. This indicates that there is no paper installed in the printer.

**2 Adjust the printhead gap lever for the thickness of paper you are using.**

Position	Used for
1 or 2	Thinner sheets
3, 4, 5 and 6	Thick sheets or Envelopes

## Installing Paper

2

Set the paper feed selector to the "PULL" position.

The display briefly shows "FRICTION".

3

1 Open the paper door.

2 Insert one sheet of paper along the front paper guide until you feel resistance.

The paper will automatically load to the first print line.

4

If ON LINE indicator is not lit, press **ON LINE** to get ready to print.

### Note:

- If the paper does not automatically load, press  (LOAD/PARK).
- When the paper feed selector is in the "PULL" position, the buzzer will sound to inform you that the selector is in the wrong position.
- When loading an envelope, if the envelope will not load smoothly, move the paper feed selector to the "PULL" position and insert the envelope manually, then move the selector back to the "PULL" position.
- When printing on envelopes or thick sheets, front feeding is recommended.

## Characters Alignment

The center of all characters printed on this printer will be aligned with the ribbon mask line (RML). The RML is a useful marker that shows you exactly where your print line is located.

**Note:**

- Remember that once you rotate the platen knob, the top of form (TOF) will no longer be recognized.

# Printer-Driver Selection

The Printer-Driver Selection contains the software codes your application software program uses to access the printer's features.

This procedure is the final step before printing and is performed in your application software program. The steps will vary, depending on the software program. Consult your software package for proper procedures. The Panasonic KX-P3124 will be your first choice. However, if the Panasonic KX-P3124 printer is not listed in your software, you must select an alternative from the following table.

**Printer-Driver Selections (in order of priority)**

<b>Printer Selection</b>	<b>Color Printer Selections* (KX-PCK11 Color Kit must be installed in the KX-P3124)</b>
Panasonic KX-P3124	Panasonic KX-P3124
Panasonic KX-P3123	Panasonic KX-P3123
Epson LQ-570 (ESC/P2™)	Panasonic KX-P2124
Panasonic KX-P2124	Panasonic KX-P2123
Panasonic KX-P2123	Epson LQ-860
Panasonic KX-P1124i	Epson LQ-2500/2550
Epson LQ Series	
IBM Proprinter X24E	
IBM Proprinter X24	

**When you use IBM Proprinter X24E/X24 mode:**

Change the Emulation to IBM Proprinter X24E/X24 mode in the Function mode (P. 52~77) and select the appropriate Printer-Driver in the software package.

\* To obtain color and utilize the internal scalable fonts, the Panasonic KX-P3124 printer driver must be selected in your software.

# Installing a Printer-Driver (Windows Ver. 3.1)

If you are using Windows Ver. 3.1, please insert your Setup Disk into drive A or B and follow the directions below.

Before you use the Setup Disk, it is recommended that you make a back-up copy and store the original in a safe place.

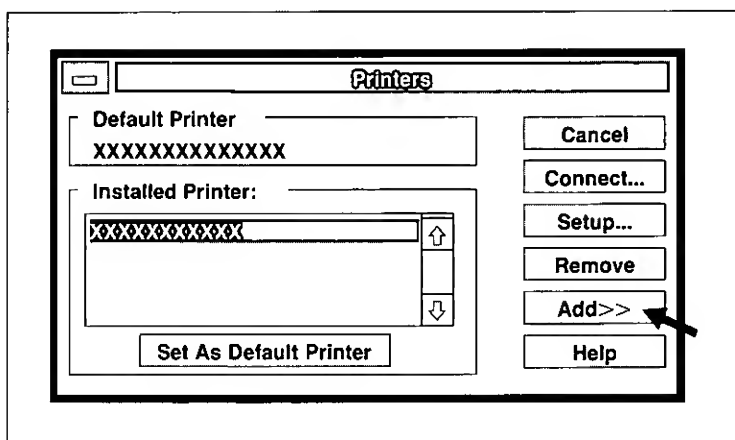

**Note:**

- Use the DISKCOPY command of the operating system to make a back-up copy. Refer to your DOS manual for further information.

**1** In "Main Group", select "Print Manager".

**2** In "Options", select "Printer Setup".

**3** Click **Add>>**.

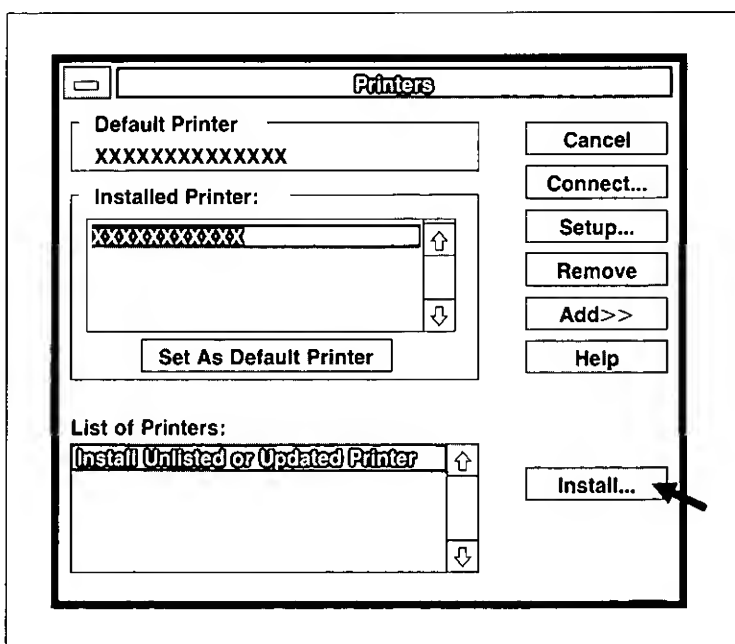

**4** In "List of Printers", select "Install Unlisted or Updated Printer".

**5** Click **Install...**.

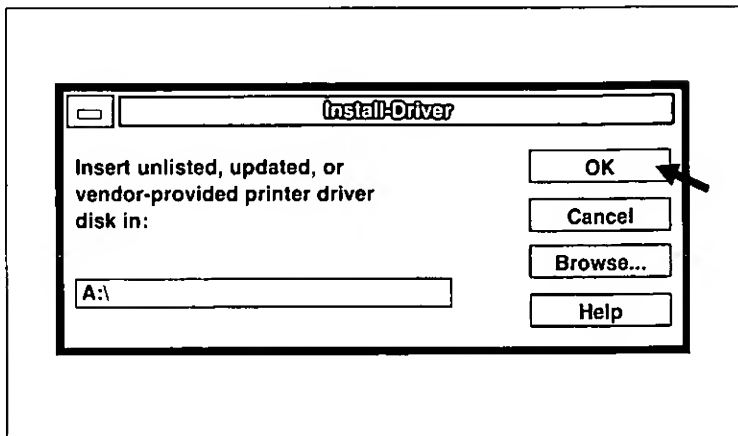

**6** Insert the Setup Disk into drive A.

If you choose to insert the Setup Disk into drive B, you must type B:\.

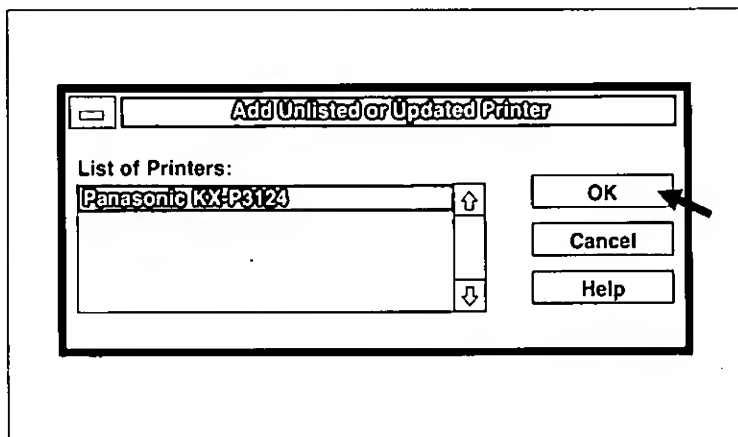

## Installing a Printer-Driver (Windows Ver. 3.1)

**7** Click **OK**.

**8** Highlight your **Panasonic** printer model.

**9** Click **OK**.

**10** Click "Set As Default Printer".

**11** Click **Close**.

**12** Exit the "Print Manager".

## Chap. 2 Setup

## Setup

- 
- 2
- A hand is shown pressing the **FF** (Font Font) key on the control panel. The panel also includes keys for **ONLINE** (FONT), **LF** (SET), **FUNCTION** (EXIT), and a **PROPERTY** menu. A power switch labeled **POWER** with **OFF** and **ON** positions is visible on the right side of the device.

**While pressing , turn the power on. After starting the printing, release .**

# Super Quiet Mode

The Super Quiet mode is a useful feature for further reducing print noise, however, it also reduces the printer's speed.

## Turning on the Super Quiet mode:

Press (SUPER QUIET).

The SUPER QUIET indicator is lit and the display briefly shows "QUIET MODE= ON".

## Turning off the Super Quiet mode:

1

Press (SUPER QUIET) again.

The SUPER QUIET indicator is off and the display briefly shows "QUIET MODE= OFF".

### Note:

- When enabled this feature will decrease your print speed.
- Your printer has the capability of saving this feature through the Function mode.  
( P. 52~77)

# Feeding the Paper

You can adjust the paper position by using the front panel switches when the printer is in the OFF LINE mode or when the printer is not printing in the ON LINE mode.

## Form Feed

Pressing **FF** advances the paper to the next top of form position.

## Line Feed

Pressing **LF** once advances the paper one line.

Holding the switch will advance the paper continuously until the switch is released.

## Micro Line Feed

Pressing **FF** while pressing **ON LINE** advances the paper one micro line ( $1/180''$ ).

Holding the switches will advance the paper continuously until the switches are released.

## Reverse Micro Line Feed

Pressing **LF** while pressing **ON LINE** reverses the paper one micro line ( $1/180''$ ).

The printer cannot reverse the paper past the printable area. Holding the switches will reverse the paper continuously until the switches are released.

### Note:

- In the pull tractor mode, Reverse Micro Line Feed will not feed paper correctly.
- When pressing **FF** or **LF**, the amount of paper which is fed is determined by the current setting for lines per inch as specified in the Function mode or software command.

## Tear Off (Rear feeding only)

This function allows you to advance your fanfold paper's perforation to the tear position. This is not dependent on your top of form position but is dependent on your form length. After tearing off the page you can return your paper to the top of form. This function can be automatic through the Function mode.

**1** If the **ON LINE** indicator is blinking, press **FUNCTION** to exit the Function mode.

**2** Be sure the paper feed selector is in the "PUSH" position.

Press **↑** (**TEAR OFF**) to advance the paper to the tear bar.

Fold the smoked plastic cover forward by lifting the tab on right side.

5

Tear off the page, using the tear bar.

6

Press  (TEAR OFF) again to reverse the paper back to the top of form.

- A Top of Form setting (see P. 50) past the printable area is ignored by Tear Off. Tear Off will use the Top of Form setting that was last saved.
- If you do not press  (TEAR OFF) the second time, once data is received, the printer will automatically reverse the paper to the top of form position.

7

Replace the smoked plastic cover.

## Paper Parking (Rear feeding only)

This function allows you to use single sheets or envelopes without removing or wasting your fanfold paper.

### Parking the Fanfold Paper

- 1 Be sure power is on and the paper feed selector is in the "PUSH" position.

Tear off the printed page(s) of the fanfold paper being used. (P. 44~45)

- 3 If the ON LINE/FUNCTION indicator is blinking, press **FUNCTION**.

Press **LOAD/PARK** to reverse the fanfold paper to the parked position.

While the paper is going back, the display shows "PAPER BACK", and when the paper is parked, the display shows "PAPER OUT", with the PAPER OUT indicator blinking. If the printer is in the ON LINE mode, it automatically goes back to the OFF LINE mode.

## Loading Single Sheets or Envelopes

1

- 1 Move the paper feed selector to the "1" position.

The display briefly shows "FRICTION".

- 2 Fold the smoked plastic cover.

2

### Top Feeding:

- 1 Raise the top cover to the single sheet position.

- 2 Separate the paper guide and load a single sheet or an envelope. (P. 33~35 "Single Sheets and Envelopes")

### Front Feeding:

- 1 Open the paper door.

- 2 Load a single sheet or an envelope. (P. 35~36 "Single Sheets and Envelopes")

3

Press **ON LINE** to enable printing.

The ON LINE indicator will be lit and the display will show "ON LINE".

### Reloading the Fanfold Paper

1

When you are finished printing, remove the sheet from the printer by rotating the platen knob.

2

### Top Feeding:

① Lower the top cover for fanfold paper.

② Replace the smoked plastic cover to its original position.

### Front Feeding:

① Close the paper door.

② Replace the smoked plastic cover to its original position.

3

Move the paper feed selector to the “ PUSH” position.

4

Press  (LOAD/PARK) to reload the fanfold paper to the first print line.

## Top of Form Function

This printer allows you to set and store the first print line position and automatically load the paper to that location. The first print line position (TOF) will remain stored in memory when power is turned off.

The printer can store the 3 different top of form positions depending on the paper feed method [fanfold paper (PUSH), single sheet (□), and single sheet with the Cut Sheet Feeder option: KX-PT11].

- 1 If necessary, redefine the page length of the paper you are using through your application software (P. 82, 88) or the printer's Function mode (P. 58, 63).

A page is defined by setting the page length through the Function Mode or the Software command.

- 2 If the ON LINE/FUNCTION indicator is blinking, press **FUNCTION**.

Press **↓** (LOAD/PARK) to load the paper.

- 4 To redefine your paper's first print position, it is recommended that you use your application software. If this feature is not provided in your software, adjust the paper position by using Line Feed, Micro Line Feed, or Reverse Micro Line Feed. (P. 43)

**Note:**

- Do not rotate the platen knob, the printer will not be able to count the number of lines.

5

Press **→** (TOF SET) to set the Top of Form for the current position.

#### Saved Top of Form

A Top of Form position (less than or equal to 5" from the top of page) will be saved even after the power is turned off. Pressing **↓** (LOAD/PARK) will advance the paper to the most recently saved Top of Form setting.

#### Temporary Top of Form

A Top of Form position set in the area greater than 5 inches will not be saved after the power is turned off, after parking the paper, after using Tear Off, or after pressing **FF** when using a single sheet.

#### Note:

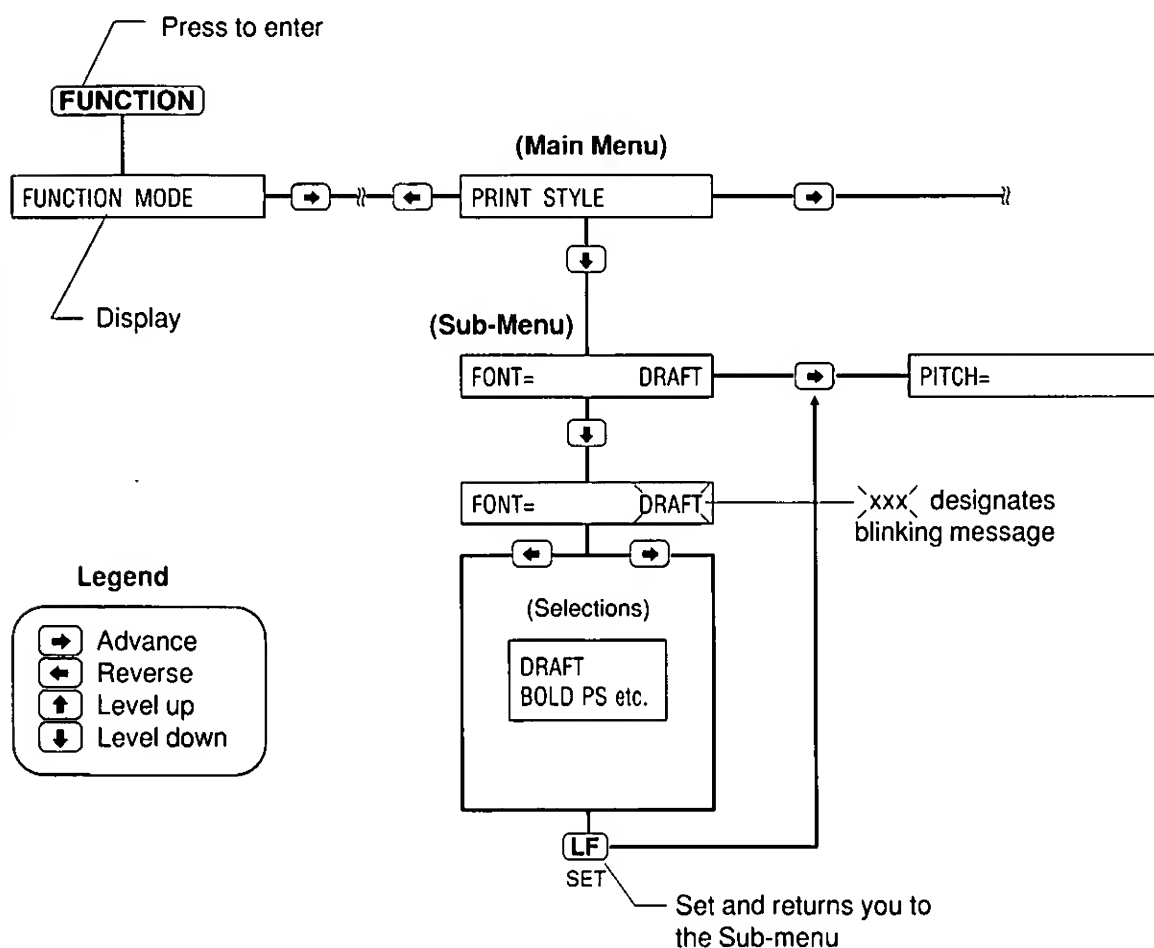

- A temporary Top of Form setting is indicated by one beep. A saved Top of Form setting is indicated by two beeps.
- When using fanfold paper, the Top of Form position must be set on the first page because the printer does not accept a top margin which is longer than one page.

# Using the EZ Set Operator Panel

You can control a wide variety of printing conditions through the Function mode. The Function mode is comprised of a Main menu and Sub-menus that allow you to select modes and parameters.  
(P. 58~69 "Function Mode Menu")

## Operation

The following flow chart diagrams the operation using the EZ Set Operator Panel. After entering the Function Mode, the black lettering (FONT, PITCH, SET and EXIT) and outlining (←, ↑, ↓, →) will help you navigate through the Main menus, Sub-menus and selections.

• Press **FUNCTION** to exit.

## Setting the Function Mode Items

Press **FUNCTION** to enter the Function mode.

The display briefly show "FUNCTION MODE" and the ON LINE/FUNCTION indicator blinks.

Press **→** or **←** to scroll to the appropriate Main menu topic (ex; PRINT STYLE).

Press **↓** to enter the Sub-menu.

A status message will appear (ex; FONT=DRAFT) to reflect the current setting. If you do not want to change the current setting, skip to step 8 on p. 54.

Press **→** or **←** to scroll to the appropriate Sub-menu topic (ex; PITCH).

Press **↓** to enter the selection menu.

A status message of your current selection will blink.  
(ex; PITCH= 10 CP( )

## Using the EZ Set Operator Panel

6

Press **→** or **←** to view the other selections.

A blinking status message will appear as you scroll through the selections.

7

Press **LF** (SET) to set the new selection.

The status message will stop blinking and an equal sign will appear to reflect your new current selection. If other changes are required at the Sub-menu level, repeat steps 4~7.

8

Press **→** or **←** to make other changes within the current Sub-menu.

If you do not want to make any other changes, proceed to step 10.

9

If changes must be made to another Main menu topic, press **↑** once and repeat steps 2 through 7.

10

Press **FUNCTION** to exit the Function mode.

- This example can be used for setting any print selection. For direct access to FONT/PITCH, see page 55 for more details.
- All settings made are temporary unless saved in a Macro.
- Temporary settings are lost when power is turned off.
- The desired settings when power is turned on should be stored as POWER ON MACRO.

## Direct Access to FONT and PITCH Setting

1

Press **FUNCTION** to enter the Function mode.

The display briefly shows "FUNCTION MODE" and the ON LINE/FUNCTION indicator blinks.

2

For font, press **ON LINE** (FONT).  
For pitch, press **FF** (PITCH).

A status message of your current selection will appear.

(ex; FONT= `DRAFT`) (ex; PITCH= `10 CP`)

3

Press **→** or **←** to view your desired font or pitch.

A blinking status message will appear as you scroll through the selections.

4

Press **LF** (SET) to set the new selection.

A beep will sound, the status message will stop blinking and an equal sign will appear to reflect your new current setting.

5

Press **FUNCTION** to exit the Function mode.

## Setting POINT SIZE

1

Press **FUNCTION** to enter the Function mode.

The display briefly shows "FUNCTION MODE" and the ON LINE/FUNCTION indicator blinks.

2

Press **→** once to select "PRINT STYLE".

3

Press **↓** to enter the Sub-menu.

A status message will appear (ex; FONT= DRAFT) to reflect the current setting.

4

Press **↓** to enter the font selection menu.

A status message of your current selection will blink.

(ex; FONT= `DRAFT`)

5

Press **→** or **←** to select the desired SC font (ex; COURIER-SC).

A blinking status message will appear as you scroll through the selections.

"SC" is a scalable font.

6

Press **LF** (SET) to set the selection.

The display will show "POINT SIZE= 10.5".

7

Press **↓** to enter the font selection menu.

A status message of your current point size will blink.

(ex; POINT SIZE= 10.5)

8

Press **→** or **←** to select the desired point size.

A blinking status message will appear as you scroll through the selections.

9

Press **LF** (SET) to set the selection.

The display will show your selected point size after showing "UPDATING CPI" and "UPDATING LPI".

**Note:**

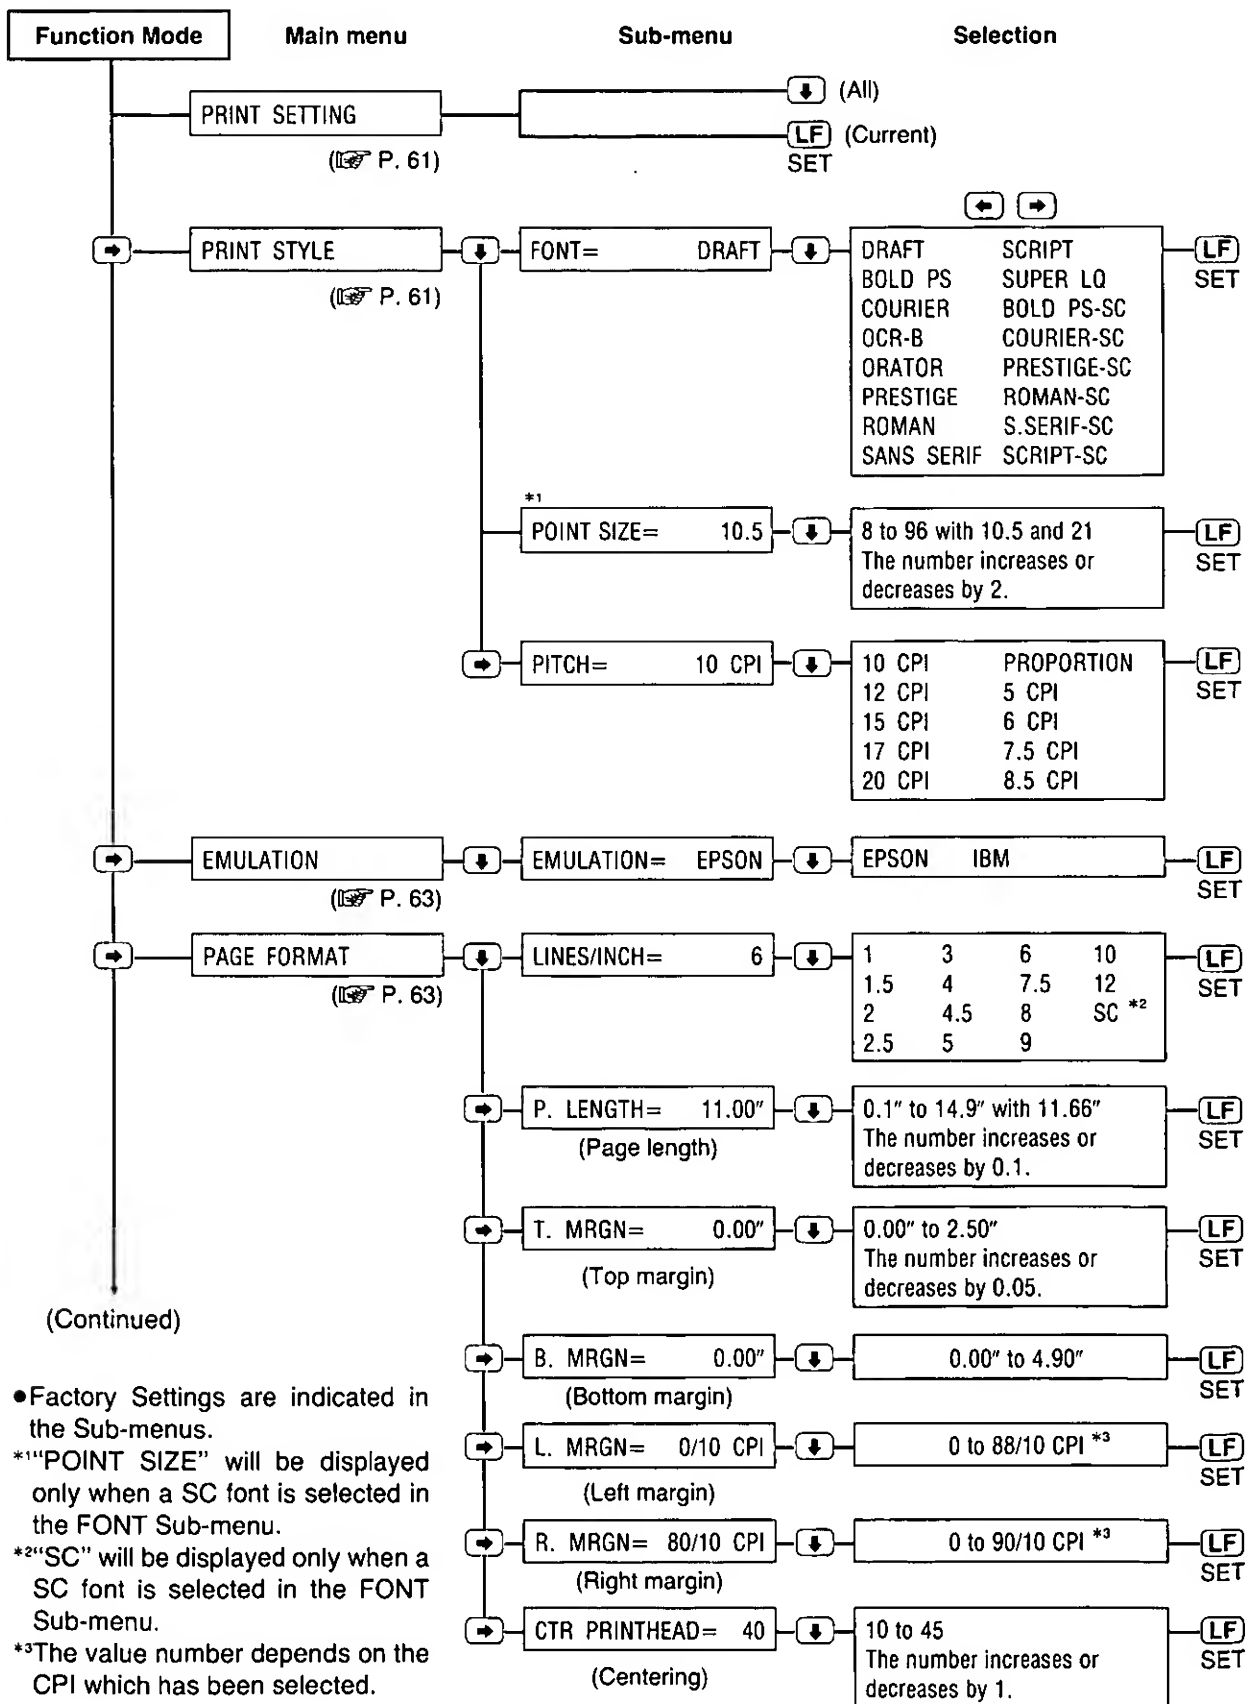

- If you set a wrong point size, pressing **↓** allows you to make a new selection.

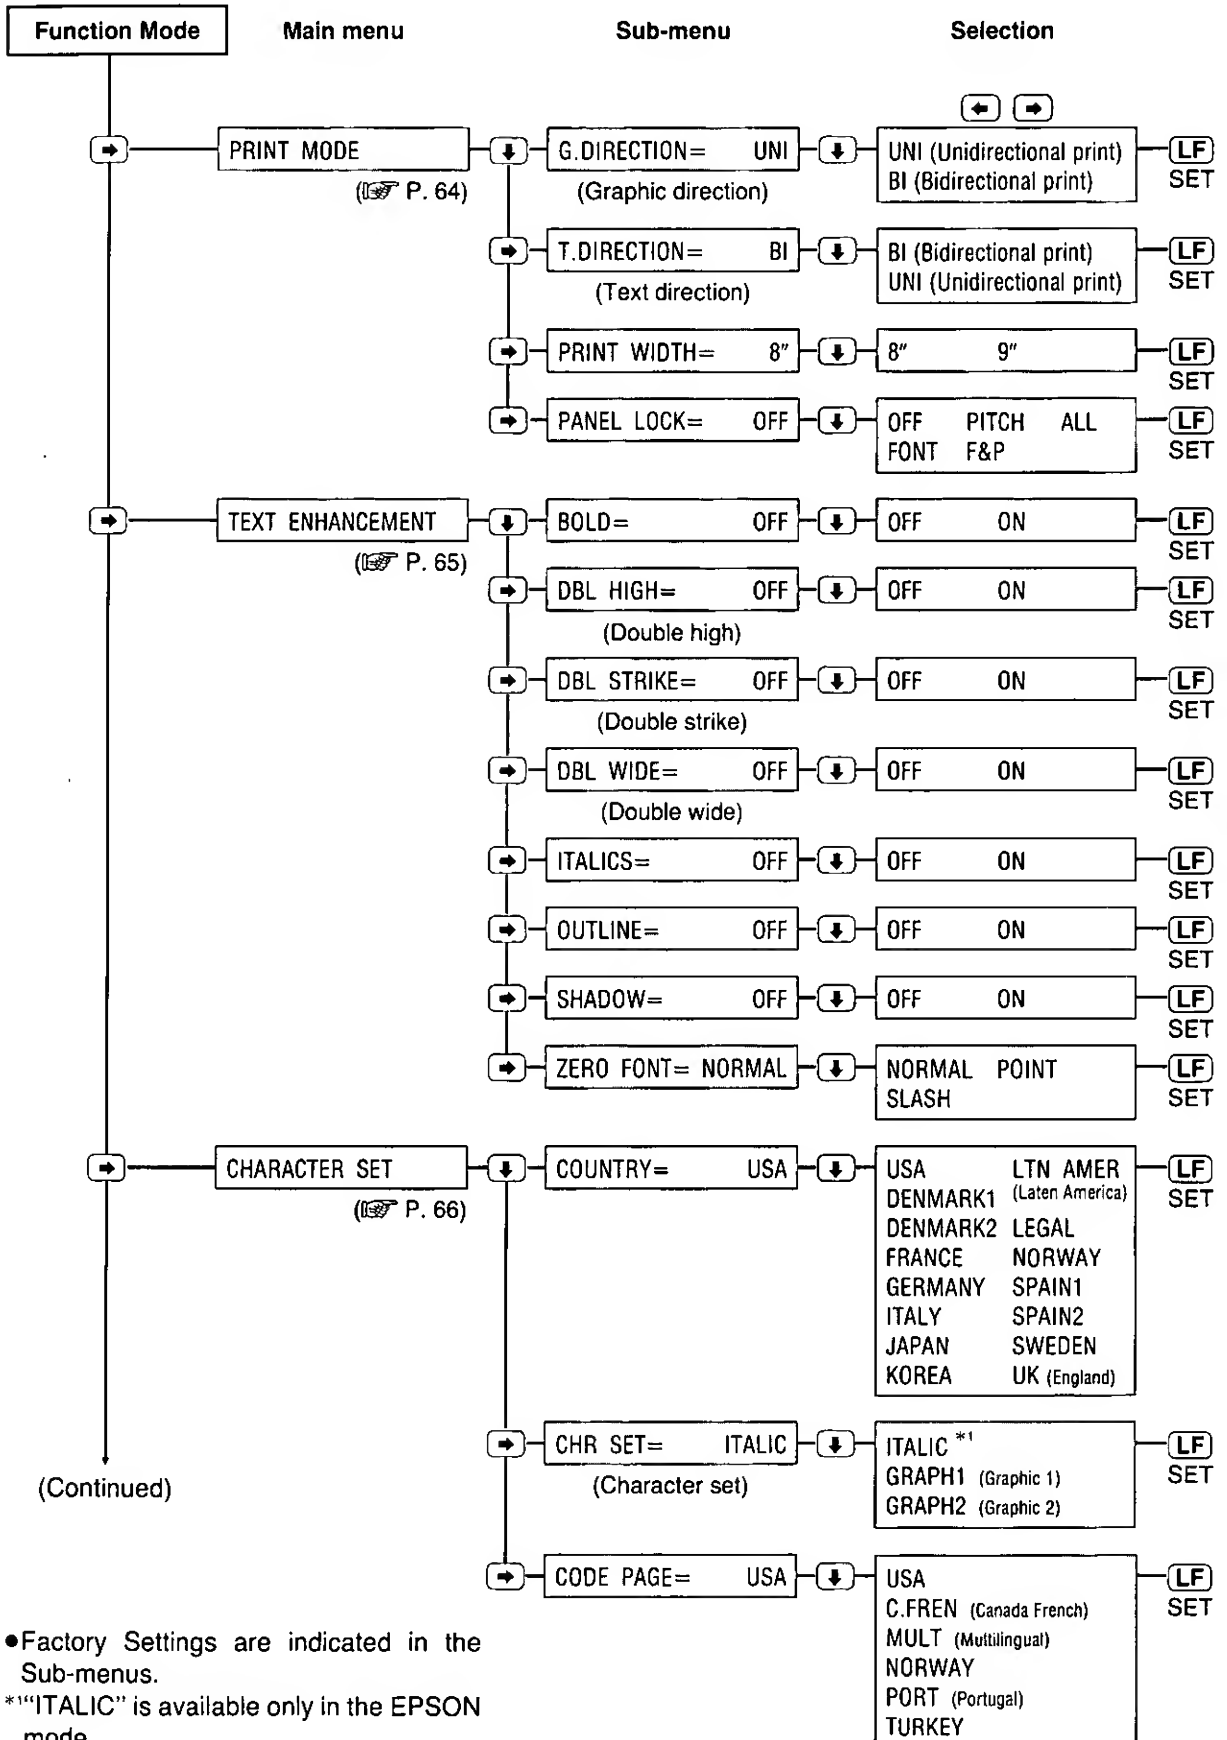

**Note:**

- When a SC FONT is selected, PITCH will be changed to "PROPORTION" (Proportional Spacing) and LINES/INCH will be changed to "SC" automatically.

# Function Mode Menu

You can control a wide variety of printing conditions through the Function mode. The Function mode is comprised of a Main menu and Sub-menus that allow you to select modes and parameters by using the EZ Set Operator Panel or the Setup Disk.

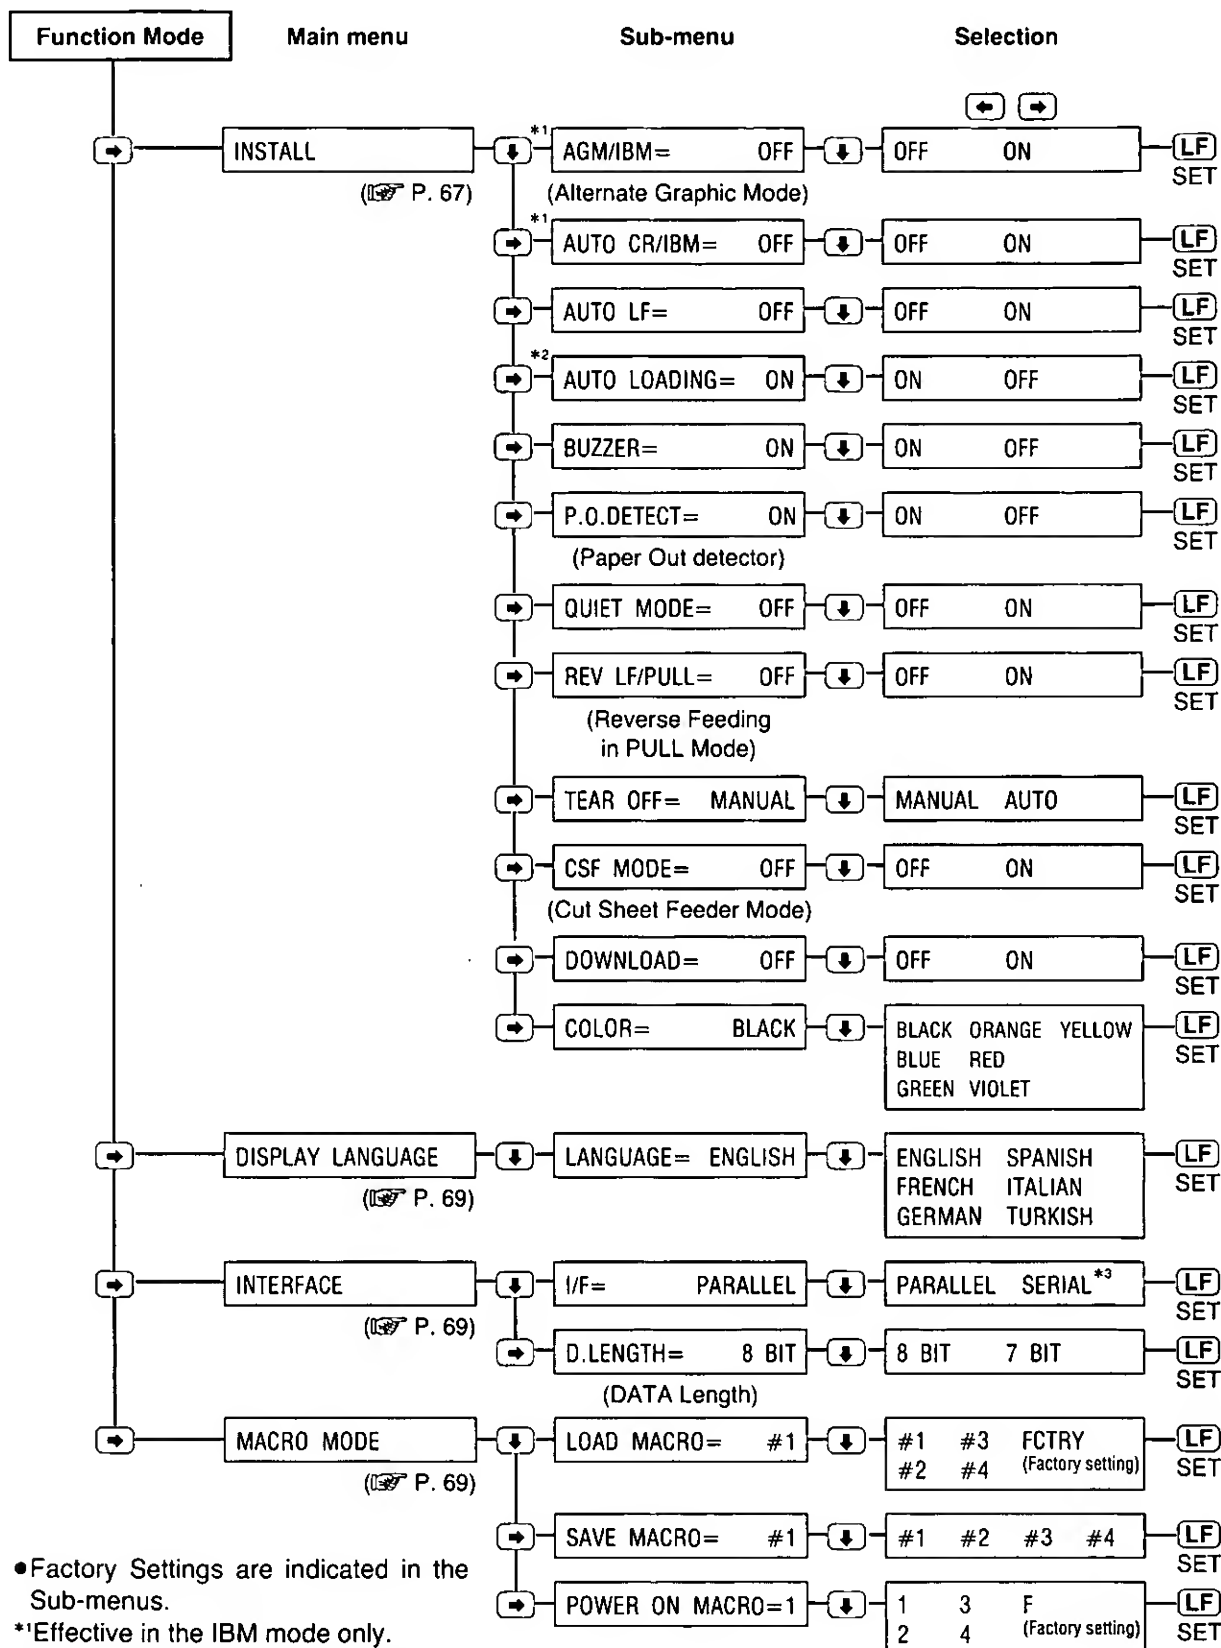

•Factory Settings are indicated in the Sub-menus.

\*1"ITALIC" is available only in the EPSON mode.

# Function Mode Menu

•Factory Settings are indicated in the Sub-menus.

\*1Effective in the IBM mode only.

\*2Ineffective when using the Cut Sheet Feeder.

\*3"SERIAL" is effective only when the optional KX-PS14, RS-232C Serial interface board is installed.

## PRINT SETTING Menu

### (To Print Out the Function mode Settings)

Before you change the Function mode settings, you can verify the settings by printing them.

To print...

Current settings only—Press **[LF]** (SET) after selecting the **PRINT SETTING** Main menu.

All settings (current, MACROs and Factory)—Press **[↓]** after selecting the **PRINT SETTING** Main menu.

## PRINT STYLE Menu

### (To Change the Font/Pitch)

#### FONT

This Sub-menu in the **PRINT STYLE** Main menu will allow you to select and set a desired font. This printer has draft, 8 LQ (Letter Quality), 1 Super LQ fonts and 6 scalable fonts. Draft is printed at the fastest speed and is normally used for printing draft documents. LQ produces the high print quality and SLQ produces much better print quality than LQ; they are used to print the final version of formal documents. If you want to see all of the font samples, use the Self Test feature on page 39.

#### (Print Example)

##### Draft:

ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789  
abcdefghijklmnopqrstuvwxyz

##### Bold PS:

ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789  
abcdefghijklmnopqrstuvwxyz

##### Courier:

ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789  
abcdefghijklmnopqrstuvwxyz

##### OCR-B:

ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789  
abcdefghijklmnopqrstuvwxyz

##### ORATOR:

ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789  
ABCDEFGHIJKLMNOPQRSTUVWXYZ

##### Prestige:

ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789  
abcdefghijklmnopqrstuvwxyz

##### Roman:

ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789  
abcdefghijklmnopqrstuvwxyz

##### Sans Serif:

ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789  
abcdefghijklmnopqrstuvwxyz

##### Script:

ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789  
abcdefghijklmnopqrstuvwxyz

##### Super Letter Quality (Roman):

ABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789  
abcdefghijklmnopqrstuvwxyz

## PITCH

The Sub-menu in the **PRINT STYLE** Main menu will allow you to select and set a desired pitch. This printer has 10 pitch selections.

The height of the characters in the different pitches is the same; only the width varies. The pitches are fixed pitch (within a pitch, all characters have the same width).

In proportional spacing, character widths vary with the character. An "I", for example, takes up less space than an "M" or a "W". Proportional printing gives the document a typeset appearance.

The following tables shows pitch availability for each font.

| Font       | 5 | 6 | 7.5 | 8.5 | 10 | 12 | 15 | 17 | 20 | PS |
|------------|---|---|-----|-----|----|----|----|----|----|----|
| Draft      | ○ | ○ | ○   | ○   | ○  | ○  | ○  | ○  | ○  |    |
| Bold PS    | ○ | ○ | ○   | ○   | ○  | ○  | ○  | ○  | ○  | ○  |
| Courier    | ○ | ○ | ○   | ○   | ○  | ○  | ○  | ○  | ○  | ○  |
| OCR-B      | ○ | ○ | ●   | ○   | ○  | ○  | ●  | ○  | ○  | ○  |
| Orator     | ○ | ○ | ○   | ○   | ○  | ○  | ○  | ○  | ○  | ○  |
| Prestige   | ○ | ○ | ○   | ○   | ○  | ○  | ○  | ○  | ○  | ○  |
| Roman      | ○ | ○ | ○   | ○   | ○  | ○  | ○  | ○  | ○  | ○  |
| Sans Serif | ○ | ○ | ○   | ○   | ○  | ○  | ○  | ○  | ○  | ○  |
| Script     | ○ | ○ | ○   | ○   | ○  | ○  | ○  | ○  | ○  | ○  |
| SUPER LQ   | ○ | ○ |     |     | ○  | ○  |    |    |    |    |

● OCR-B micron prints using the Sans Serif font.

### (Print Example)

```

5 cpi printing
(Pica elongated)
6 cpi printing
(Elite elongated)
7.5 cpi printing
(Micron elongated)
8.5 cpi printing
(Compressed elongated)
10 cpi printing (Pica)
12 cpi printing (Elite)
15 cpi printing (Micron)
17 cpi printing (Compressed)
20 cpi printing (Elite Compressed)
Proportional Spacing
    
```

- For direct access to font and pitch settings, see page 55.
- To override your software with these two features (FONT and/or PITCH) activate the above setting(s); see "PANEL LOCK". (P. 64)

## POINT SIZE

You can alter the point size to make a font larger or smaller only when the scalable font (BOLD-SC, COURIER-SC, PRESTIGE-SC, ROMAN-SC, SANS SERIF-SC and SCRIPT-SC) is selected in the FONT Sub-menu.

When a SC font is selected, PITCH will be changed to "PROPORTION" (Proportional Spacing) and LINES/INCH will be changed to "SC" automatically.

## EMULATION Menu

### (To Change Your Printer's Emulation)

This printer can emulate the Epson LQ-570 or the IBM Proprinter X24E.

( P. 38 "Printer-Driver Selection")

## PAGE FORMAT Menu

### (To Change the Lines Per Inch/Page Format)

#### LINES/INCH

This Sub-menu in the **PAGE FORMAT** main menu will allow you to change lines per inch.

#### Note:

- When a SC font is selected in the FONT Sub-menu, lines per inch will be changed to "SC" automatically. The value of "SC" will be changed by the point size and the most suitable space between the lines for the each point size is set up. You can change the lines per inch within "1"~"12" even if a SC font is selected.

Page formatting is determined by:

- ① Page length (P.LENGTH)
- ② Top margin (T.MRGN)
- ③ Bottom margin (B.MRGN)
- ④ Left margin (L.MRGN)
- ⑤ Right margin (R.MRGN)

- The center position default is 40. If you have shortened your printable area, you may want to reposition your printhead to a new centered position. This is accomplished through the **CTR PRINTHEAD** Sub-menu in the **PAGE FORMAT** Main menu.

**Note:**

- When changing the left/right margins,  /  moves the carriage right or left. Pressing  /  when the carriage reaches the end of the platen moves it to the opposite end.
- If the left margin is set to the right of the right margin, the right margin is reset to 80 (10 cpi) automatically.
- The skip perforation command overrides the front panel bottom margin setting.
- When the **PRINT WIDTH** is changed, the left margin will default to 0" and the right margin will default to 8" or 9" automatically depending on your selection of the print width. Please refer to chart on page 97 for the maximum number of characters per line according to your pitch selection. To change the print width to either 8" or 9", refer to "PRINT MODE Menu" (in this page).

## PRINT MODE Menu

### (To Change Print Direction etc.)

This printer allows you to select print direction in graphics and text modes.

When you print graphics such as tables, set the **G.DIRECTION** Sub-menu to **UNI**. The printer will print left-to-right only and provide precise vertical alignment. Setting to **BI** will print in both directions and reduces printing time, however the vertical alignment may not be as precise.

#### PRINT WIDTH

This Sub-menu in the **PRINT MODE** Main menu will allow you to change the print width to either 8" or 9".

#### PANEL LOCK

This Sub-menu in the **PRINT MODE** Main menu will allow you to decide the priority between the printer's front panel settings and the software commands. This **PANEL LOCK** Sub-menu is set to **OFF** when shipped which allows the software commands to override the printer's front panel settings.

To activate the printer's

Font only—Set **PANEL LOCK=FONT**

Pitch only—Set **PANEL LOCK=PITCH**

Font and Pitch only—Set **PANEL LOCK=F&P**

All settings—Set **PANEL LOCK=ALL**

**Note:**

- When you set a SC font in the **FONT** Sub-menu and "FONT" in the **PANEL LOCK** Sub-menu, **PITCH** will be changed to "PROPORTION" (Proportional Spacing) automatically.

## TEXT ENHANCEMENT Menu

### (To Enhance Your Text)

This printer allows you to have a variety of print styles using this Sub-menus. Any enhancements can be set to **ON** (enable) or **OFF** (disable).

Enhancements are independent and are set individually, therefore, **any enhancement can be combined with another.**

**Double high printing** makes the height of a character twice that of a normal one.

**Double wide printing** makes the width of a character twice that of a normal one.

**Double strike printing** uses a double strike with two passes of the printhead.

**Bold (Emphasized) printing** is done with one pass of the printhead at half speed, which allows horizontally adjacent dots to be printed.

**Outline printing** makes the outline character of a normal one.

**Shadow printing** makes the shadow character of a normal one.

**Italic printing** makes a character slope from the right downwards.

(Print Example)

**Emphasized Printing**  
**Double High**  
**Double Strike Printing**  
**Double Wide**  
*Italic Printing*  
**Outline Printing**  
**Shadow Printing**

### ZERO FONT

This mode will allow you to set one of the following zero font selections.

Numeral "0" and alphabet "O" are very similar. To easily distinguish between them in a document, print "0" or "Ø" instead of normal zero. Select and set one of the following in the **ZERO FONT** Sub-menu.

| Selections | Zero font |
|------------|-----------|
| NORMAL     | 0         |
| POINT      | 0         |
| SLASH      | Ø         |

When the international character set is set to Norway, zero slash is printed as Ø.

## CHARACTER SET Menu

### (To Change the Character Set)

#### COUNTRY

This Sub-menu in the **CHARACTER SET** Main menu will allow you to set one of the following international character set selections.

| Selections | Character set | Selections | Character set |
|------------|---------------|------------|---------------|
| USA        | USA           | LTN AMER   | Latin America |
| DENMARK1   | Denmark 1     | LEGAL      | Legal         |
| DENMARK2   | Denmark 2     | NORWAY     | Norway        |
| FRANCE     | France        | SPAIN1     | Spain 1       |
| GERMANY    | Germany       | SPAIN2     | Spain 2       |
| ITALY      | Italy         | SWEDEN     | Sweden        |
| JAPAN      | Japan         | UK         | England       |
| KOREA      | Korea         |            |               |

#### CHR SET

This Sub-menu in the **CHARACTER SET** Main menu will allow you to set one of the following character set selections.

| Selections | Character set |                   |
|------------|---------------|-------------------|
| ITALIC     | Italic        | Epson mode only   |
| GRAPH1     | Graphic 1     | Epson or IBM mode |
| GRAPH2     | Graphic 2     |                   |

#### CODE PAGE

This Sub-menu in the **CHARACTER SET** Main menu will allow you to set one of the following code page selections.

| Selections | Code page       | Selections | Code page |
|------------|-----------------|------------|-----------|
| USA        | USA             | NORWAY     | Norway    |
| C.FREN     | Canadian French | PORT       | Portugal  |
| MULT       | Multilingual    | TURKEY     | Turkey    |

**INSTALL Menu****(To Control Initial Setup Conditions)****Alternate Graphics Mode**

The alternate graphics mode (AGM) will allow you to select Epson graphics while in the IBM mode.

| Sub-Menu | Selections | Function                         |
|----------|------------|----------------------------------|
| AGM/IBM  | ON         | Sets Alternate Graphics Mode     |
|          | OFF        | Releases Alternate Graphics Mode |

**Automatic CR**

| Sub-Menu    | Selections | Function                                  |
|-------------|------------|-------------------------------------------|
| AUTO CR/IBM | ON         | Activates Automatic CR on LF, VT, ESC+"J" |
|             | OFF        | Prevents Automatic CR on LF, VT, ESC+"J"  |

**Automatic LF**

| Sub-Menu | Selections | Function          |
|----------|------------|-------------------|
| AUTO LF  | ON         | Activates CR+LF   |
|          | OFF        | Activates CR only |

**Automatic Paper Loading**

When the **AUTO LOADING** Sub-menu is **ON**, the printer automatically loads a single sheet or an envelope to the first print line.

**Buzzer Sound Control**

Select and set **ON** (sounds) or **OFF** (no sound) in the **BUZZER** Sub-menu.

**Paper Out Detector**

When the **P.O.DETECT** Sub-menu is **ON**, the printing stops once the paper is no longer under the platen.

To avoid this and print to the end of the paper, set the **P.O.DETECT** Sub-menu to **OFF**.

## INSTALL Menu

### Super Quiet Printing

This feature reduces printing noise, however, it also reduces the printing speed.  
Select and set **ON** (activate) or **OFF** (deactivate) in the **QUIET MODE** Sub-menu.

### Reverse Feeding in Pull Mode

When you control reverse feeding in pull mode, select and set **ON** (enable) or **OFF** (disable) in the **REV LF/PULL** Sub-menu.

### Automatic Tear Off

This feature loads the fanfold paper's perforation to the tear off position automatically.

| Sub-Menu | Selection | Function                                |
|----------|-----------|-----------------------------------------|
| TEAR OFF | AUTO      | Automatic Tear Off                      |
|          | MANUAL    | Manual Tear Off (using TEAR OFF switch) |

### Cut Sheet Feeder Mode

#### CSF MODE

This Sub-menu will allow you to use the Cut Sheet Feeder (**ON**). This menu should be **OFF** when not in use.

(This setting is effective only when the paper feed selector is in "□" position and C.S.F. option (KX-PT11) is installed. (☞ C.S.F. manual)

### Download Buffer Control

If you need to download special characters, set the **DOWNLOAD** Sub-menu to **ON**. By setting the Sub-menu to **OFF**, more data can be sent to your printer's buffer, thereby freeing up your computer.

### Color Printing

Before you use this function, make sure that the color kit (KX-PCK11) is installed in the printer. (☞ The color kit manual)

#### COLOR

Your desired print color may be selected through the front panel or through your application software.

#### Note:

- The appropriate driver must be selected in the application software which supports color.  
Refer to page 38 for Printer-Driver Selection information.
- Only one color can be printed at a time.  
Multi-color printing may be accessible through your application software.

## DISPLAY LANGUAGE Menu

### (To Select the Display Language)

Select and set one of the six display languages in the **LANGUAGE** Selection.

## INTERFACE Menu

### (To Select Interface)

The **INTERFACE** menu allows you to select the appropriate method of communication (parallel/serial) with the computer.

To activate serial communication, you must first install the KX-PS13 or KX-PS14 serial interface. With the KX-PS13 installed, the parallel interface is deactivated.

## MACRO MODE Menu

### (To Utilize the MACROs)

A **MACRO** allows you to store a combination of your most frequently used print conditions (all settings in the Function mode) into the printer's memory which can be easily recalled and/or changed. This will enable you to recall one of 4 combinations (MACROs #1, #2, #3, #4) at the touch of a button eliminating the need to reset all your frequently used features.

#### **SAVE MACRO**

The **SAVE MACRO** is a Sub-menu in the **MACRO MODE** Main menu. This mode will allow you to save your current customized printing requirements to any **SAVE MACRO** (#1, #2, #3 or #4) selection. To load (recall) your customized macro select the same number in the **LOAD MACRO** Sub-menu.

#### **LOAD MACRO**

The **LOAD MACRO** is a Sub-menu in the **MACRO MODE** Main menu. This mode will allow you to recall your current customized printing requirements from any **LOAD MACRO** (#1, #2, #3 or #4) selection.

#### **POWER ON MACRO**

The **POWER ON MACRO** is a Sub-menu in the **MACRO MODE** Main menu. This mode will allow you to automatically recall a desired **MACRO** or **FACTORY** setting each time you turn on the printer.

**FACTORY setting (Default setting):** All the original settings in the Function mode can be restored in the printer, as they were originally set when the printer was shipped. However, it **does not** change any of the settings which are stored in MACRO #1, 2, 3 or 4. To do so, recall the Factory setting, and save each Macro one at a time.

# Using the Setup Disk

This Setup Disk can only be used in an IBM-PC or a compatible computer with a 3.5" floppy disk drive.

Before you use the Setup Disk, it is recommended that you make a back-up copy and store the original in a safe place.

This printer has been factory set to operate with most of the popular software packages. In most cases there will be no need to change the Function mode items. Refer to pages 58~60 to verify that the factory settings meet your requirements. If no changes are required, you should be ready to print.

## Note:

- Use the DISKCOPY command of the operating system to make a back-up copy. Refer to your DOS manual for further information.
- You may find it convenient to install the Setup Disk programs directly onto your C Drive, rather than reading them from the Setup Disk each time a change is necessary. Either method is acceptable.

To perform an automatic installation of the Setup Disk files onto your C Drive, follow the steps below:

1. Insert the Setup Disk into drive A or B.
2. Type A: (or B:) and press Enter.
3. Type INSTALL and press Enter.

This procedure automatically creates a directory called 3124 and copies all of the programs from your Setup Disk onto your C Drive.

At your C:\> prompt, type CD 3124 and press Enter.

Type SETUP and press **Enter** to complete the procedure. Be sure to type this instruction as one word.

If not, you will receive a Syntax error message.

## Running the Setup Program

- 1** Insert your Setup Disk into either drive A or B.

<For Dos>

- 2** Type A: (or B:) and press **Enter**.

- 3** Type SETUP

- 4** Press **Enter**.

You will receive a "Please wait!!" message until your first screen automatically appears.

<For WINDOWS>

- 2** Select Run from the File menu.

- 3** Type A:\SETUP (or B:\SETUP)

- 4** Click **OK** (or Press **Enter**).

**5** The first screen is an introduction to the operation of the Setup Disk. Please read it through and press any key to continue.

**6** The <Menu> window will be highlighted.

**Note:**

- You can proceed through the Setup Disk using a computer mouse or your arrow keys.
- **[ESC]** exits you to DOS when you are at the <Menu> window.

Using the keyboard:

- **[↓] / [↑]** to move within the current window.
- **[→]** to advance to <Item> and <Setting> windows.
- **[Enter]** to make selection in <Setting> window.
- **[←]** to return to previous window.

Using the mouse:

- Highlight the selection and click the left mouse button.
- Click the right mouse button to move to the previous screen.

## Print Settings

Before you change any selections on the Setup Disk, you can verify the settings by getting a print-out.

**1** Press **[F5]**.

A Print Setting window will be displayed.

**2** Press **[A]** or **[C]**, or highlight the appropriate command and press **[Enter]**.

"A": All the settings (current, MACROS, Factory) will be printed.

"C": Current settings will be printed.

**3** If you do not want a print-out of your settings, press **[ESC]**.

## Setting Selections on Setup Disk

- 1 In the <Menu> window, press **↑** or **↓**.

Select the desired menu  
(ex; PRINT STYLE).

- 2 Press **→**.

<Item> window will be highlighted.

- 3 Press **↑** or **↓**.

Highlight the desired item  
(ex; FONT).

<< KEY OPERATION >>  
[F1=HELP] [F3=SAVE TO DISK] [F5=PRINT SETTINGS]  
[F2=FACTORY SETTINGS] [F4=LOAD FROM DISK] [F10=SEND TO PRINTER] [ESC=EXIT]

## 7 Press **←**.

<Item> window will be highlighted.

To make additional changes in the <Item> window, repeat steps 3 to 6.

## 8 Press **←**.

<Menu> window will be highlighted.

To make additional changes in the <Menu> window, repeat steps 1 to 6.

## 9 When all changes have been made, you may perform any one of the following operations:

- Save to Disk—**F3** (P. 74)
- Print Settings—**F5** (P. 71)
- Send to Printer—**F10** (P. 75)

## 10 After performing one of the above operations, and with the <Menu> window highlighted, press **ESC**.

## 11 Press **Y** or **N**.

"Y": You have exited the Setup program.

"N": The display will return to the <Menu> window.

## Save to Disk

**1** Press **F3**.

A Save to Disk window will be displayed.

**2** Enter a file name (up to 8 characters, upper or lower case).

**3** Press **Enter**.

All the settings will be saved on the disk and the display will return to the <Menu> window.

**4** Press **ESC**, **Y** to exit to DOS.

## Load from Disk

**1** Press **F4**.

A Load from Disk window will be displayed.

**2** Use **↓** or **↑** to highlight your desired file name.

**3** Press **Enter**.

All the settings in the file will be loaded to your screen.

To transfer these settings to your printer, you must perform the **F10** Send to Printer operation: (P. 76)

Send to Printer

- 1 Press **F10** .  
A Port Selection window will be displayed.
- 2 Press **↑** or **↓** .  
Select the desired Port selection item (ex; PORT).

- 3 Press **→** .  
A Selection window will be displayed.
- 4 Press **↓** or **↑** .  
Highlight the desired setting (ex; LPT1).
- 5 Press **Enter** .  
The desired item has been set.
- 6 Press **←** .  
To make additional changes in the Port Selerion menu, repeat steps 2 to 5.

## Using the Setup Disk

**7** Press **↓** until **YES** is highlighted.

**8** Press **Y** or **N**.

"Y": All the settings will be sent to the printer.

"N": The display will return to the <Menu> window.

**9** Press **ESC**, **Y** to exit to DOS.

The screenshot shows the 'Setup Utility (xxxxxxxxxx)' window. On the left is a 'Menu' list with options: PRINT STYLE, EMULATION, PAGE FORMAT, PRINT MODE, TEXT ENHANCEMENT, CHARACTER SET, INSTALL, DISPLAY LANGUAGE, INTERFACE, and POWER ON MACRO. On the right is an 'Item' list with 'FONT' selected. A 'Port selection' dialog box is open, showing settings: PORT: [LPT1], BAUD RATE: [9600], PARITY: [NONE], DATA LENGTH: [8bit], and PROTOCOL: [DTR]. At the bottom of the dialog is a 'Send to printer (Y/N)' option with [YES] and [NO] choices. Below the dialog, the 'COMMENT' section says 'Select print style'. The 'KEY OPERATION' section at the bottom right shows '[F10=SEND TO PRINTER][ESC=EXIT]'.

## FACTORY Setting

**1** Press **F2**.

**2** Press **Y** or **N**.

"Y": All the screen settings will be reset to the FACTORY settings.

"N": The display will return to the <Menu> window.

**3** If **Y** was selected, you may perform one of the following operations:

- Save to Disk — **F3** (P. 74)
- Print Setting — **F5** (P. 71)
- Send to Printer — **F10** (P. 75)

**4** Press **ESC**, **Y** to exit to DOS.

The screenshot shows the 'Setup Utility (xxxxxxxxxx)' window. The 'Menu' and 'Item' lists are the same as in the previous screenshot. A confirmation dialog box is open with the text 'Are you sure? (Y/N)' and [YES] and [NO] choices. Below the dialog, the 'COMMENT' section says 'Select print style'. The 'KEY OPERATION' section at the bottom left shows '[F2=FACTORY SETTINGS]' and at the bottom right shows '[ESC=EXIT]'.

## Help

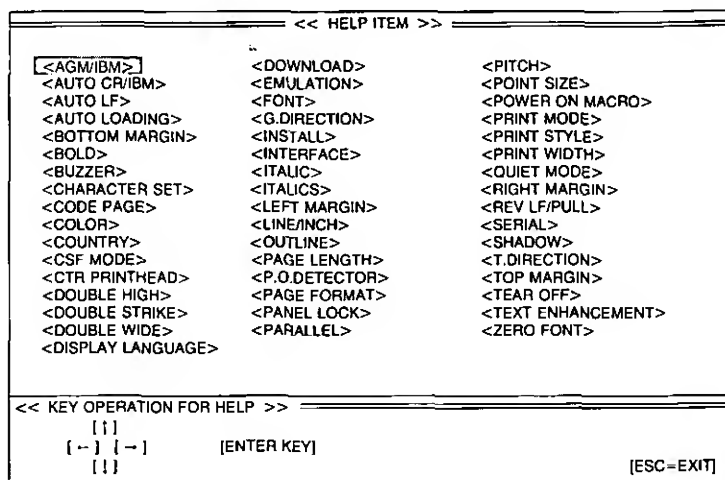

If you cannot remember what a particular function does, HELP will show you the explanations of the functions.

### 1 Press **F1**.

A Help Item screen will be displayed.

### 2 Press **←** / **→** / **↑** / **↓**.

Highlight your desired item.  
(ex; AGM/IBM)

### 3 Press **Enter**.

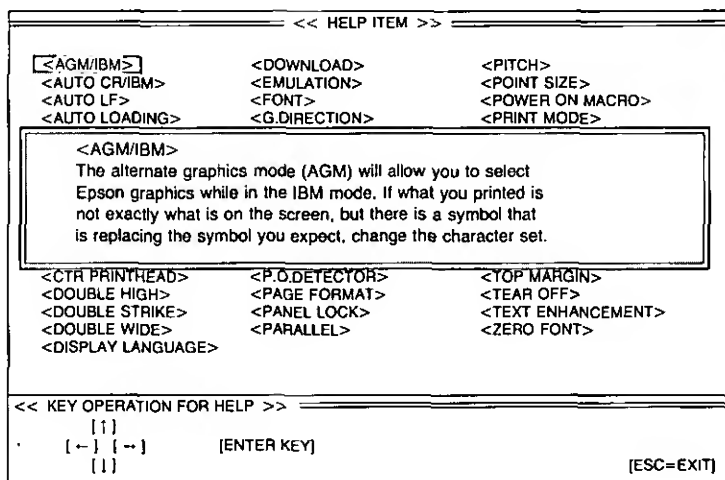

A definition will be displayed.

### 4 Press **ESC**.

The Help Item screen will be displayed.

### 5 Press **ESC**.

The display will return to the  
<Menu> window.

# Epson ESC/P2 Mode (Epson LQ-570 Mode)

This section is for the development of programs and printer drivers and assumes the reader is proficient in programming. More detailed information has been stored in the Command Reference program on the Setup Disk. (P. 90)

## Font Selection

| Function                          | Name                                    | Parameter                                                                                                                                                                                                                                                                                                                                                                      |

# Command Reference Program

The Command Reference program allows you to access a detailed explanation of each software command or the proportional spacing tables on your computer screen. Each displayed explanation can be printed out if required.

Before you use the Setup Disk, it is recommended that you make a back-up copy and store the original in a safe place.

**Note:**

- Use the DISK COPY command of the operating system to make a back-up copy. Refer to your DOS manual for further information.
- You may find it convenient to install the Setup Disk programs directly onto your C Drive, rather than reading them from the Setup Disk each time a change is necessary. Either method is acceptable.

To perform an automatic installation of the Setup Disk files onto your C Drive, refer to page 70.

## 1 Insert the back-up disk into either drive A or B.

<For DOS>

## 2 Type A: (or B:) and Press **Enter**.

## 3 Type CMDREF

## 4 Press **Enter**.

Screen 1 will be displayed.

<For WINDOWS>

## 2 Select Run from the File menu.

## 3 Type A:\CMDREF (or B:\CMDREF)

## 4 Click **OK** (or Press **Enter**).

Screen 1 will be displayed.

### Screen 1

```
<< Panasonic KX-P3124 command reference utility (xxxxxxxxxx) >>
- - SELECT EMULATION - -
=====

[EPSON]
IBM

=====

[↑]/[↓]      : Select emulation
[Enter]      : Set emulation
[E]          : Exit to DOS
```

5 Press **↑** or **↓**.

Select an emulation.

6 Press **Enter**.

The emulation will be set and screen 2 will be displayed.

7 Press **Pg.Up** / **Pg.Down** or **↑** / **↓**.

Select a command.

Screen 2

```
< <  Panasonic KX-P3124 command reference utility (xxxxxxxxxx)  > >
      -- SELECT COMMAND --      (EPSON)
=====

[Esc]                      : SELECT EMULATION mode
[E]                        : Exit to DOS
```

|                       |                                                                 |
|-----------------------|-----------------------------------------------------------------|
| [↑]/[↓]               | Move the cursor one line up/down                                |
| [Pg.Up]/<br>[Pg.Down] | Moves the cursor to the first command of the previous/next item |
| [Enter]               | Displays the explanation of the command                         |
| [Esc]                 | Returns to screen 1                                             |
| [E]                   | Exits to DOS                                                    |

**Note:**

- There is a list of proportional spacing tables after the software commands list.  
If you want to see a porportional spacing table, select your desired table and press **Enter**.

## 8 Press **[Enter]**.

This screen will show the detailed explanation of the command.

If you want to exit the Command Reference Program, go to step 9.

If you want to print this explanation, press **[Enter]** again and press **[Y]**.

“Y”: The explanation will be printed.

“N”: The display will return to screen 3.

### Screen 3

```

Print current command description? (Y / N)
Yes      No
```

## 9 Press **[E]**.

You have exited the Command Reference Program.

|                       |                                                   |
|-----------------------|---------------------------------------------------|
| [↑]/[↓]               | Scrolls the text one line down/up                 |
| [Pg.Up]/<br>[Pg.Down] | Displays the explanation of previous/next command |
| [Esc]                 | Returns to screen 2                               |
| [Enter]               | Prints the detailed explanation of the command    |
| [E]                   | Exits                                             |

#### Note:

- You can proceed through the Command Reference Program using a computer mouse or your keyboard. Highlight the desired item and click the left mouse button, or follow the directions on your screen for keyboard operation.

# Periodic Maintenance

The printer does not require any routine maintenance. However, reasonable care of the printer will extend its life. The following precautions and periodic measures are recommended:

- Cleaning the unit is the most important operation the user can perform. The frequency of cleaning is dependent upon the environment.
  - Turn the power OFF.
  - Clean the case and covers with a soft cloth. Use any mild commercial cleaner on the cloth, do not spray directly on the printer.
  - Remove the top and the smoked plastic covers. Vacuum or dust the inside area of the unit. Be very careful not to damage the printhead ribbon cable and the carriage drive belt.
  - The platen should be cleaned with denatured alcohol only.
  - The carriage guide bar can be lubricated with a very light oil. Contact your Authorized Panasonic Service Center for advice on lubrication.

## Ribbon Cassette

A single ribbon permits the printing of approximately 3 million total draft characters. When the printing starts to fade, gently push the counter spring in the ribbon cassette hole with the tip of a ballpoint pen or other object. **Once the ribbon cassette is mounted onto the carriage and printing is performed for a short time, the characters will become darker.**

### Note:

- Do not re-ink the ribbon before printing starts to fade. If the ribbon has too much ink, the characters may smear when printed.
- Wear and tear of the printhead pins may cause serious damage to the ribbon and cause the printing to fade. In such cases the printer needs servicing.

# Troubleshooting

Most problems associated with the printer can be traced to improper setup, installation, or cabling. The error messages shown on the display (☞ Table 6.2) and the following table will assist the user in identifying and correcting some of the more common problems. If you need additional help, contact the store from which the unit was purchased.

| Symptom                                          | Possible Cause                                      | Probable Solution                                                                                |
|--------------------------------------------------|-----------------------------------------------------|--------------------------------------------------------------------------------------------------|
| Ink smears                                       | Printhead gap lever is not in the proper position   | Move the lever toward the (+) position until ink does not smear (☞ P. 16)                        |
| Printout is faint                                | Printhead gap lever is not in the proper position   | Set the lever to the proper position (☞ P. 16)                                                   |
| Carriage moves but there is no printing          | Ribbon not installed correctly                      | Re-insert ribbon (☞ P. 18~22)                                                                    |
|                                                  | Printhead gap lever is not in the proper position   | Set the lever to the proper position (☞ P. 16)                                                   |
| Printer does not power up                        | No AC power                                         | Check power cord (☞ P. 17)                                                                       |
| Power is on but printer does not print           | Printer is not ON LINE                              | Press ON LINE switch                                                                             |
|                                                  | Interface cable is not properly connected           | Secure connection (☞ P. 17)                                                                      |
| Paper out sensor is inoperative                  | P.O.DETECT is OFF                                   | Set P.O.DETECT to ON (☞ P. 60, 67)                                                               |
| Buzzer sounds when installing single sheet       | Paper feed selector is in "PUSH" or "PULL" position | Set selector to "□" position (☞ P. 16)                                                           |
| Paper wrinkles when using tractor feed           | No reverse tension on paper                         | Set paper supply lower than printer                                                              |
| Printer can't load single sheet in Friction mode | C.S.F. is ON                                        | Set C.S.F. to OFF when not using the Cut Sheet Feeder (☞ P. 60, 68)                              |
|                                                  | Paper feed selector is in "PUSH" position           | Set paper feed selector to "□" position                                                          |
| Unexpected characters appear in printing         | Emulation is set incorrectly                        | Check printer driver of your software package and set emulation accordingly (☞ P. 38~40, 58, 63) |

Table 6.1 Troubleshooting (Continued)

| Symptom                                                               | Possible Cause                                                           | Probable Solution                                                                                                                                                                                                        |

|                                                                       | Incorrect emulation is set                                               | Select proper printer driver in your software (☞ P. 38)                                                                                                                                                                  |
| *Prints in 2 different colors                                         | Yellow color gap lever of color kit is not in the proper position        | Set color gap lever of color kit to the proper position<br>(☞ "Color Adjustment" in the color kit installation manual)<br>Reinstall the color kit<br>(☞ "Installing the Color Kit" in the color kit installation manual) |

Table 6.1 Troubleshooting

\* Option

## Note:

• Your printer has a paper out detector. When an out of paper condition occurs, printing stops, the printer goes to the OFF LINE mode, and the PAPER OUT light starts blinking. To continue printing to the end of the current page, follow the steps below.

- ① Press **ON LINE** repeatedly until the page is completed.
- ② Install the new paper.
- ③ Press **ON LINE**.

• The paper out detector can be disabled through the Function mode.

| Error Messages   | Possible Cause                                                                       | Probable Solution                                                                                                                                                |
|------------------|--------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|

# Paper Specifications

Paper which may be used with this unit must be within the specifications provided below.

## Fanfold Paper

Width: 4 to 10 inches (102 to 254 mm)

Quality and number of sheets:

| Type of paper             | Sheets | Weight         |          |                  |          |
|---------------------------|--------|----------------|----------|------------------|----------|
|                           |        | lbs            |          | g/m <sup>2</sup> |          |
|                           |        | push           | pull     | push             | pull     |
| Fine-quality paper        | 1      | 16 to 22       | 16 to 24 | 60 to 83         | 60 to 90 |
| Non-carbon                | 2 to 4 | 11 to 14 (17*) |          | 41 to 53 (64*)   |          |
| Multi-layered with carbon | 2      | 11 to 14 (17*) |          | 41 to 53 (64*)   |          |

\*only for the last sheet

Note:

- When using multi-part fanfold paper, especially in environments which have very high or low temperature and/or humidity, we recommend the use of the bottom feed pull mode to optimize paper handling and print quality.
- To insure optimum print quality, 16 to 22 lbs (60 to 83 g/m<sup>2</sup>) is recommended for graphic printing.
- In multi-layered paper with carbon, the carbon is equivalent to a sheet of paper.
- “Weight in pounds” represents the weight of 500 [17×22 inches (432×559 mm)] sheets.
- The printer will handle multipart papers up to 0.013 inch (0.32 mm) thick. Up to 4 copies of 14 lb. chemical release paper can be used.
- Multipart forms consisting of 2 parts may be used for rear feeding (Push mode). For 3 or 4 part forms, we recommend bottom feeding for optimum print quality.

## Single Sheet

Width: 4 to 11.7 inches (102 to 297 mm)

Height: 5 to 14.3 inches (127 to 363 mm)

Weight in pounds (g/m<sup>2</sup>): 14 to 24 (53 to 90 g/m<sup>2</sup>)

Note:

- Paper should be within operating temperature and humidity ranges at least 24 hours prior to use.

## Envelope

#6 and #10 size envelopes are recommended. Since envelopes vary in size, paper weight and construction, we cannot guarantee print quality and paper handling for all types of envelopes.

Note:

- To optimize print quality printing should not occur in areas where the edges overlap.

Printing Area

Fanfold paper

|   | Push           | Pull          |
|---|----------------|---------------|
| A | 1" (25.4 mm)   |               |
| B | 0.7" (17.8 mm) |               |
| C | 0.6" (15.2 mm) | 5.4" (137 mm) |
| D | 1" (25.4 mm)   |               |

- A:** Value A indicates the area near the paper perforations where the quality may not be optimum.
- B:** Value B indicates the minimum distance between the sprockets and first printable character. (When the left tractor is set on the left end and the margin is set to 0.)
- C:** Value C indicates the area from the top edge of the paper to the top of the first printed character.
- D:** Value D indicates the position where paper out is detected and printing may not be optimum.

Single sheet and Envelope

|   | Single Sheets and Envelopes |
|---|-----------------------------|
| B | 1.5" (38 mm)                |
| C | 0.6" (15.2 mm)              |
| D | 1" (25.4 mm)                |

- B:** Value B indicates the minimum distance between the edge of the paper and the first printable character. (When the left paper guide is set to the left end and the margin is set to 0.)
- C:** Value C indicates the area from the top edge of the paper to the top of the first printed character.
- D:** Value D indicates the position where paper out is detected and printing may not be optimum. (When printing on envelopes do not print on area where edges overlap. Print quality may not be optimum.)

Parallel Interfacing

A method of transferring data from a computer to a printer through a parallel interface based on the Centronics Standard.

Specifications:

- data transfer speed: 1000 cps minimum
- synchronization: external STROBE pulse
- logic levels: TTL
- handshaking: BUSY and ACK signals
- connector type: 57-30360 (AMPHENOL) or equivalent
- cable: use a shielded cable (6'5" /1.95 meters) or less in length.

When the printer is processing data, the BUSY signal is high. The printer will not accept new data from the computer. After the processing is completed, the BUSY signal goes low. (The BUSY signal is also high when the printer is OFF LINE). When the busy signal occurs, the ACK signal goes low indicating to the computer that the data has been processed and the printer is ready to accept more data. This handshaking routine occurs each time a character is sent to the printer.

|           | BUSY | SLCT | PO   | ERROR |
|-----------|------|------|------|-------|
| ON LINE   | LOW  | HIGH | LOW  | HIGH  |
| OFF LINE  | HIGH | LOW  | LOW  | LOW   |
| PAPER OUT | HIGH | LOW  | HIGH | LOW   |

Printer Status signals

Parallel Interface Connector (Printer side)

| Signal pin | Return side pin | Signal | Direction |
|------------|-----------------|--------|-----------|
| 1          | 19              | STB    | Input     |
| 2          | 20              | DATA 1 |           |
| 3          | 21              | DATA 2 |           |
| 4          | 22              | DATA 3 |           |
| 5          | 23              | DATA 4 |           |
| 6          | 24              | DATA 5 |           |
| 7          | 25              | DATA 6 |           |
| 8          | 26              | DATA 7 |           |
| 9          | 27              | DATA 8 | Output    |
| 10         | 28              | ACK    |           |
| 11         | 29              | BUSY   |           |
| 12         |                 | PO     |           |

Pin Configuration (Parallel)

| Signal pin | Return side pin | Signal       | Direction |
|------------|-----------------|--------------|-----------|
| 13         |                 | SLCT         | Output    |
| 14         |                 | AUTO FEED XT | Input     |
| 15         |                 |              |           |
| 16         |                 | SG           |           |
| 17         |                 | FG           |           |
| 18         |                 | +5V          | Output    |
| 31         | 30              | PRIME        | Input     |
| 32         |                 | ERROR        | Output    |
| 33         |                 | SG           |           |
| 34         |                 |              |           |
| 35         |                 |              |           |
| 36         |                 |              |           |

## Connector pin signals

### STB...STROBE

- This is a synchronizing input signal to read data into the printer.
- This signal is normally high. Data is read in when it goes low.
- The pulse must be low for at least 1 microsecond.

### DATA 1–DATA 8

- These are the input signals which carry the 8 data bits of information.
- The signal is read in synchronization with the STROBE pulse. A high level indicates a logical "1".
- The signal must be present 0.5 microsecond before and after the STROBE pulse.

### ACK...ACKNOWLEDGE

- This is an output signal to the computer indicating that the printer is ready to receive the next block of data. It is sent out when the BUSY signal drops from high to low. Therefore, it can be thought of as a data request pulse.
- The signal is normally high. When the condition becomes true, the signal goes low.
- The ACK signal is automatically sent whenever the printer is switched ON LINE.

### BUSY

- This output signal indicates the status of the printer. The signal is high when the printer is busy and cannot receive data.
- The signal is high under the following conditions:
  1. receive buffer full
  2. printer is processing data
  3. printer is OFF LINE
  4. printer is in an error condition

### PO...PAPER OUT

- This output signal indicates that paper out detector detects the absence of paper.
- The signal is normally low and goes high during a "Paper Out" condition.

### SLCT...SELECT

- SELECT is an output signal which indicates the ON LINE or OFF LINE state of the printer. The signal is high in the ON LINE state and low when OFF LINE.
- The printer enters the ON LINE state:
  1. when the printer is turned on
  2. when PRIME is received
  3. when the RESET command is received
  4. when the ON LINE switch is pressed
- The printer enters the OFF LINE state:
  1. when the printer is out of paper
  2. when the printer is switched OFF LINE

### AUTO FEED XT (AFXT)

- This input signal determines if a line feed (LF) command will be added to each carriage return (CR).
- When AFXT is low, CR+LF action occurs. When AFXT is high, only a carriage return is performed.
- Auto LF setting in the Function mode can alter the response by the printer to an AFXT signal. If auto LF is ON, the printer will perform a CR+LF regardless of the level of the incoming signal. When auto LF is OFF, this automatic action is disabled.

**SG...SIGNAL GROUND**

- The twisted pair return wires (pins 19–30) are connected to signal ground.

**FG...FRAME GROUND**

- Frame ground is the same as chassis ground.

**+5 V**

- This is for evaluation only. It should not be used to supply power for external equipment.

**PRIME**

- This input signal is used to initialize the printer. The signal is normally high and goes low to reset the printer. It can be received anytime during printer operation.

**ERROR**

- This output signal is an “error” or “fault” condition. Normally high, this signal goes low when an error occurs. An error condition can be caused by:
  1. a “Paper Out” condition
  2. the printer is OFF LINE
  3. an overload condition exists

**Timing Chart (When normal printing code is received)**

- T1 .... 0.5  $\mu$ s (Min)
- T2 .... 1  $\mu$ s (Min)
- T3 .... 0.5  $\mu$ s (Min)
- T4 .... 5  $\mu$ s (Max)
- T5 .... 1 ms or less when buffer is not full  
1 s or less when buffer is full

Timing Diagram

# Initialization

The printer is initialized under the following conditions:

- the AC power is turned on
- the PRIME signal is received
- the RESET PRINTER command is received
- the clear buffer function is used

When the printer is initialized, the following conditions are set:

- the print buffer is cleared
- the receive buffer is cleared (not cleared by RESET PRINTER command)
- the download character buffer is cleared (not cleared by PRIME signal in IBM Proprinter X24E mode or by RESET PRINTER command)
- horizontal tabs are set every 8 columns
- vertical tab settings are cleared
- all modes set by control and escape commands will be cleared
- present form position is designated as top of form
- the Self Test mode is cleared
- the Function mode settings are read and set
- Control Panel settings are not changed by PRIME signal or RESET PRINTER command\*
- the printhead goes to the home position

\*Some software packages send PRIME signal at the beginning of their programs. Print modes set by the Function mode will not change.

## Clear Buffer Function

This function initializes the printer from the front panel. This feature is very useful when you want to clear the receive buffer (information recently sent from the computer and is currently printing) without changing the front panel settings.

1

Press **ON LINE** to stop the printing and enter the OFF LINE mode.

2

Press **LF** while pressing **FUNCTION** to clear the data in the receive buffer.

3

Press **ON LINE** to enter the ON LINE mode.

# Hex Dump

In this mode, all data received from the computer is printed in hex code instead of the normal ASCII characters. Function codes for the printer (CR, LF, HT, etc.) are not executed. This mode is very useful to debug programs.

## To enter the Hex Dump mode:

Turn the power on while pressing both **FF** and **LF**.

The display shows "HEX DUMP MODE".

## To release the Hex Dump mode:

Turn the power off, then back on.

# Character Set Tables

\*1

\*2

### Note:

\*1 These characters can be changed only in the Epson ESC/P2 mode. In the IBM Proprinter X24E mode, International Character Set is set to USA and it can not be changed.

\*2 These characters are effective in both Graphic Character Set 2 of the Epson ESC/P2 and IBM Proprinter X24E modes.

**AGM (Alternate Graphics Mode):**

AGM will allow you to select Epson graphics while in the IBM mode.

**ASCII:**

"ASCII" is an acronym for "American Standard Code for Information Interchange". In ASCII, each character has a unique code.

**BASIC:**

BASIC is a commonly used microcomputer programming language.

**Baud (baud rate):**

Baud is a unit of data transmission speed between computer devices. Can be but not necessarily equal to bits per second.

**Bidirectional printing:**

Processing speed is increased by bidirectional printing. That is, the printer prints right-to-left as well as in the normal left-to-right manner.

**Binary:**

Binary is a numbering system using the two digits of zero (0) and one (1).

**Bit:**

Bit is an abbreviation for "binary digit (0~1)", and is the smallest unit of information used by a printer or computer.

**Bit-image graphics:**

Graphics which are created through a series of dots printed in vertical columns.

**Buffer:**

Buffer is an area of memory which stores data temporarily.

**Byte:**

Byte is the unit of information used by a printer or computer. One byte is equivalent to eight (8) bits.

**Character set:**

Character set is the set of characters, numbers, and symbols available for printing.

**Code page:**

The computer system stores characters and numbers as a numerical data. The code page is a table which is used to change them into the numerical data.

**Control codes:**

Control codes are commands from the computer to the printer that are non-printable characters. They are used to control printer functions.

**cpi:**

"cpi" is an abbreviation for "characters per inch", and means the maximum number of characters printed in one horizontal inch.

**cpl:**

"cpl" is an abbreviation for "characters per line", and means the maximum number of characters printed on one line.

**cps:**

"cps" is an abbreviation for "characters per second", and means the number of characters printed in one second.

**CR (Carriage Return):**

"CR" is a control code that returns the printhead to the left margin.

**Decimal (Dec.):** Decimal is a numbering system composed of 10 digits 0, 1, 2, 3, 4, 5, 6, 7, 8 and 9.

**Default:** Default has two meanings: one indicates the previously set conditions or settings executed when the power is turned on, reset or initialized; and the other indicates the original settings when shipped from the factory (FACTORY settings).

**Dot matrix printer:** An impact printer whereby wires (pins) strike the ribbon and subsequently a dot prints on the paper. The software in the printer supplies the commands which determine which pins are activated to form the appropriate character(s).

**Dots per inch (DPI):** A measure of resolution used for monitors and printers.

**Double strike printing:** Double printing is a print quality enhancing mode which uses a double strike with two passes of the printhead, feeding the paper 1/180 inch (0.14 mm) between the first and second pass (in Epson ESC/P2 mode only).

**Double high printing:** Double high printing makes the height of a character twice that of a normal one.

**Double wide printing:** Double wide printing makes the width of a character twice that of a normal one.

**Download character:** Download character is a character which the user can design.

**Draft:** Draft is one of three print qualities available on this printer. Draft mode uses a minimum number of dots per character to maximize printing speed.

**Driver:**  P. 116 "Printer drivers"

**Emphasized printing:** Emphasized printing is a print quality enhancing mode done in one pass of the printhead at half speed, allowing horizontally adjacent dots to be printed producing a darker character.

**Emulation:** Emulation means to operate like another printer. This printer can emulate the Epson LQ-570 or the IBM Proprinter X24E.

**Escape (ESC) sequence:** "ESC" is a control code that begins most printer commands. The characters which follow the "ESC" are interpreted as command, rather than characters to print.

**ESC/P2:** An expanded level of commands for 24 and 48 pin dot matrix printers.

- Fanfold paper:** Fanfold paper has regularly spaced sprocket holes on the left and right sides and pages are separated by a perforation between each sheet. May also be known as computer paper or tractor paper.
- FF (Form feed):** "FF" is a control code that advances the paper one page.
- Fixed pitch printing:** A type of printing whereby each characters is the same width and prints as equal intervals.
- Font:** All characters of a typeface having the same size, weight, style character table, typeface and rotation. Changing an attribute selects a new font.
- FORTRAN:** FORTRAN is one of many computer programming languages, which is used primarily in scientific applications.
- Function:** Function allows you to determine how the printer will operate.
- Graphics:** Groups of dots or characters that are used to create images, as opposed to text and numbers.
- Graphics mode:** A special mode of print in which only raster graphics printing is possible.
- Hexadecimal:** Hexadecimal is a numbering system using the 16 digits, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, A, B, C, D, E and F.
- Horizontal motion index:** A fixed distance to move horizontally when printing characters.
- Initialization:** Initialization means to reset the printer to the initial start up condition.
- Interface:** Interface is the connection between the two separate systems, such as the computer and the printer. A parallel interface transfers data one character or code at a time, and a serial interface transfers data one bit at a time.
- International character set:** A set of characters defined by each country.
- I/O:** "I/O" is the symbolic notation for "Input/Output".
- Italics:** A font style in which the character slants to the right. Used for emphasis, this is sometimes called oblique.

**Justification:** The alignment of multiple lines of text along the left margin, right margin or both margins. When both margins are justified, the term is full justification.

**Letter Quality (LQ):** LQ is one of three print qualities available on this printer. LQ mode increases the number of dots per character to improve the print quality but decrease the printing speed.

**LF (Line Feed):** "LF" is a control code that advances the paper one line.

**Line spacing:** The space between lines of type. Also called leading.

**Liquid Crystal Display (LCD):** LCD is a display to show the messages which guide the operation or it may show the error messages. (☞ P. 96) The message is composed of 16 characters at most.

**LSB:** "LSB" is an acronym for "Least Significant Bit", and means the rightmost position in a binary number.

**MACRO memory function:** This feature allows this printer to easily save and recall a particular combination of functions, even if the power is turned off.

**Margin:** The area between the edge of the paper and the first or last print position; left, right, top or bottom margin.

**Menu:** Menu is a list of topics from which you can enter to select the desired conditions or settings. The Function mode in this printer is composed of a Main menu and Sub-menus. (☞ P. 58~69)

**MICRO LINE FEED:** MICRO LINE FEED function allows you to feed the paper by one micro line (1/180 inch). (☞ P. 43)

**MSB:** "MSB" is an acronym for "Most Significant Bit", and means the leftmost position in a binary number.

**Multipoint mode:** The mode in which the printing of scalable fonts is possible.

- OFF LINE:** OFF LINE is the condition in which the printer can not communicate with the computer.
- ON LINE:** ON LINE is the condition in which the printer can communicate with the computer.
- Overline printing:** Overline printing produces a continuous line above the characters, using the first pin of the printhead.
- Parallel interface:** Transmitting data one byte at a time from computer to printer.
- Parity:** Parity is a method for a computer and printer to check the accuracy of data transfer.
- PASCAL:** PASCAL is a commonly used microcomputer programming language.
- Perforation:** Perforation indicates the tear position on the fanfold paper.  
(☞ P. 100)
- Pitch:** Pitch is the number of characters which will print in one inch. Pitch is equivalent to characters per inch (cpi).
- Platen:** Platen is the rubber roller which is a backing for the paper when printing.
- Point size:** A measure of character height used in typesetting. A point=1/72 of an inch.
- Printable area:** The area of a page where the print quality is assured.
- Printer drivers:** Most of today's off the shelf software programs use printer drivers to control printer functions. These drivers contain the software codes your software program uses to access printer features. With the printer driver installed, you will seldom need to know any of this printer commands.
- Printing area:** The area of the page within the margins, where printing actually occurs. The printing area is equal to or less than the printable area.
- Proportional spacing (PS):** Proportional spacing is a printing method of adjusting the character space in which a character is printed. A "w" will take up more space than an "i".
- Protocol:** Protocol is the set of rules permitting communication between a computer and printer when a serial interface (RS-232C) is used. It covers polarity, baud rate, parity, data length, start bit and stop bit.
- Pull tractor:** A paper feeding device that "pulls" continuous paper through the printer from the exit side.
- Push tractor:** A paper feeding device that "pushes" continuous paper through the printer from the loading side.

**RAM:** RAM is an acronym for "Random Access Memory". It is the part of the printer's memory in which data is stored, control codes or download characters are to be printed. RAM is cleared when the printer is turned off.

**Raster graphics:** The method used to send graphics in one-dot high lines.

**Reset:** Returning to the printer's original settings.

**ROM:** ROM is an acronym for "Read Only Memory". It is the part of the printer's memory in which predefined characters and operating information for the printer are stored. ROM is not cleared when the printer is turned off.

**Scalable fonts:** The user can alter the point size of a selected font to make the font larger or smaller.

**Self test:** Self test is a method for testing the operation of the printer.  
( P. 41)

**Serial interface:** Transmitting data one bit at a time from computer to printer.

**Shielded Cable:** Shielded cable is a cable wrapped with a special metal around its wires. This guards against radio interference.

**Skip perforation:** Skip perforation means nothing is printed in a specified area before and after the page perforation.

**String concatenation:** This is the joining of two or more bytes of data into a single command.

**Style:** A font attribute which changes the appearance by printing the character on a slant. (Italic)

**Super Letter Quality (SLQ):** SLQ is one of three print qualities available on this printer. SLQ mode uses a maximum number of dots per character to improve the print quality more than LQ mode but decreases the printing speed less than LQ mode.

**Super QUIET mode:** Super QUIET mode is a helpful feature of this printer which reduces printing noise.

**Top of Form:** Top of Form is the first line position on the paper. This printer has the "Top of Form function" a helpful feature which loads the paper automatically to the designated position.

**Typeface:** All characters of a single, unified design at any size and rotation. Example: Roman, Prestige, etc.

**Unidirectional printing:** The printer prints left-to-right only. Printing speed is slow compared with bidirectional printing. This print method permits better vertical alignment.

**User-defined characters:** Also called download characters, these are custom characters defined within RAM.

**Weight:** A font attribute that determines the thickness of the lines creating the character. (Bold)

**Windows:** An operating environment which lies between the operating system (DOS) and an application, that controls the system devices.

- Printhead nose . . . . . 20
- Printing area . . . . . 63, 100
- Proportional Spacing (PS) . . . . . 58, 62, 116
- Protective paper . . . . . 12
- Pull tractor . . . . . 23, 28~32
- Push tractor . . . . . 23, 24~27

## R

- Re-inking ribbon . . . . . 93
- Rear feeding . . . . . 23, 24~27
- Receive buffer . . . . . 104
- Reverse line feed (REV LF/PULL) . . . . . 60, 68
- Reverse micro line feed . . . . . 43
- Ribbon cassette . . . . . 11, 18~22, 93, 122
  - mounting . . . . . 18~21
  - removing . . . . . 21, 22
- Right margin (R.MRGN) . . . . . 58, 63
- Roman . . . . . 8, 58, 61, 97

**S**

Sans Serif . . . . . 8, 58, 61, 97  
 Script . . . . . 8, 58, 61, 97  
 Self test . . . . . 41  
 Serial interface . . . . . 8, 16, 60, 97, 122  
 Setup . . . . . 17~41  
 Setup Disk . . . . . 8, 11, 39, 40, 70~77, 90~92  
   Command Reference program . . . . . 90~92  
   Function Mode program . . . . . 70~77  
   Printer-driver . . . . . 39, 40  
 SET switch . . . . . 14, 15  
 SG (SIGNAL GROUND) signal . . . . . 103  
 Shadow printing . . . . . 59, 65  
 Single sheet . . . . . 33~36, 99, 100  
 SLCT (SELECT) signal . . . . . 102  
 SLQ (Super Letter quality) . . . . . 8, 58, 61, 97  
 Smoked plastic cover . . . . . 12, 13, 15, 16  
 Software commands . . . . . 78~92  
   ESC/P2 mode . . . . . 78~84  
   IBM Proprinter X24E mode . . . . . 85~89  
 Specifications . . . . . 97~100  
 STB (STROBE) signal . . . . . 102  
 SUPER QUIET indicator light . . . . . 14  
 Super QUIET MODE . . . . . 42, 60, 68  
 SUPER QUIET switch . . . . . 14

**T**

Tear Off . . . . . 44~45, 60, 68  
 TEAR OFF switch . . . . . 14  
 Top cover . . . . . 13, 15, 16  
 Top margin (T.MRGN) . . . . . 58, 63  
 Top of form (TOF) set . . . . . 50, 51  
 Tractor . . . . . 23, 24~32  
   pull tractor . . . . . 23, 28~32  
   push tractor . . . . . 23, 24~27  
 Tractor clamping lever . . . . . 25, 26, 29, 31  
 Troubleshooting . . . . . 94~96  
 TTL (Transistor-Transistor-Logic) . . . . . 101

**U**

Unidirectional printing (UNI) . . . . . 59, 64, 118  
 Unpacking . . . . . 11~13

**Z**

Zero font . . . . . 59, 65

# Options and Supplies

|          |                                                          |
|----------|----------------------------------------------------------|
| KX-PS13  | RS-232C/Current Loop Serial Interface Board (19.2 K Bps) |
| KX-PS14  | RS-232C/Serial Interface Board (9600 Bps)                |
| KX-PT11  | Auto Cut Sheet Feeder (Single Bin)                       |
| KX-P150  | Ribbon Cassette (Black)                                  |
| KX-P150C | Ribbon Cassette (4 Colors)                               |
| KX-PCK11 | Color Kit (KX-P150C, Gear Unit, Motor Unit)              |

## FOR USERS IN CONTINENTAL UNITED STATES ONLY

### TECHNICAL SUPPORT CALLS

If you have read this manual and tried the troubleshooting procedures and you are still having difficulty, please contact the store from which the unit was purchased.

You may also call the technical support telephone number which is operational during east coast business hours (9:00 AM to 5:00 PM).

The technical support number is: 1-800-222-0584  
(Options and supplies: 1-800-346-4768)
